# Meeting assets for Election Integrity are ready!

Review action items

## Meeting summary

### Quick recap

The meeting featured a presentation by Dr. Douglas Frank on election integrity, focusing on evidence of widespread issues in Colorado and specifically in Chaffee County. Dr. Frank discussed his experiences in 48 states, his recent trip to South Korea to observe elections, and the global implications of election fraud. He presented data showing inflated voter rolls, high churn rates, and suspicious voting patterns in Chaffee County, attributing these problems to centralized state control of elections rather than local officials. Dr. Frank emphasized the need for local control, transparency, and in-person voting to restore trust in the electoral process. He urged attendees to form grassroots teams to address these issues and shared stories from his work across the country. The presentation included calls for community engagement and warnings about potential election crises in the near future.

### Next steps

#### Anna Martelaro

- Get access to the ELLY program to analyze voter rolls and assist with election integrity efforts.

### Summary

#### Highway Flag Project

Blane Clark led a meeting that included a pledge and benediction, followed by an introduction of Dr. Frank as a speaker. Blane explained that their main project involves placing flags along highways from Johnson Village to Noah's Ark, which were installed before Memorial Day and subsequently removed. He noted that none of the approximately 100 flags had significant damage, with only one flag having a rip.

#### Election Integrity Presentation Overview

Mark Kostelic introduced Dr. Douglas Frank, a physicist and election integrity advocate. Dr. Frank stated he planned to present data on election issues in Chaffee County and discuss his work across

48 states. He also outlined that the presentation would be divided into three parts, covering elections in general, specific issues in Chaffee County, and insights from his recent election observation in Korea. He also mentioned his connection to Tina Peters' case, noting that he had initiated the effort to secure backups in her office in 2021 and had been prohibited from testifying at her trial.

**South Korean Election Investigation**

Dr. Frank stated that as a scientist and election modeler who has been predicting presidential elections since 1980, and shared his background in both science and Christianity. He explained that he was invited to South Korea to help investigate election fraud after meeting with former Prime Minister Juan Kiwan at CPAC, and described his collaboration with South Korean election integrity experts including Attorney Park. Doug Frank mentioned that his involvement in the South Korean election investigation became public when a commercial about election security was released, though he had been trying to keep his identity hidden initially.

**South Korea Election Fraud Investigation**

Dr. Frank shared his observations from a recent trip to South Korea, where he investigated election fraud claims with a team of podcasters and local officials. He described how they documented irregularities in early voting, including cases where more people were reported to have voted than actually went to polling places. He further explained how the situation escalated when police seized ballots from voting locations, leading to massive protests involving hundreds of thousands of people who surrounded government buildings and prevented officials from entering or leaving. He compared South Korea's recent shift toward communism to trends in the United States, noting concerns about national security implications given South Korea's role in manufacturing critical defense components.

**Election Fraud Investigation Findings**

Dennis discussed his experience in South Korea investigating election systems and his discovery that AWEB (Association of World Election Bodies) appears to be involved in election fraud, potentially acting as a hub for exporting fraudulent practices globally. He explained that election fraud typically involves ballot stuffing rather than ballot flipping, citing examples of seized fraudulent ballots and driver's licenses. Dennis warned that upcoming elections in November could face significant challenges due to foreign interference, potentially leading to widespread court cases and civil unrest similar to the "hanging chads" issue but on a much larger scale across multiple states.

**South Korea Political Protests Insights**

Dennis shared his experiences from visiting South Korea, where he observed massive protests. He discussed how South Korean churches are actively engaging in political issues, contrasting with

some American churches that have been hesitant to address political concerns. Dr. Doug concluded by sharing a message from a popular South Korean podcaster expressing gratitude to America for past support and calling for continued collaboration to protect freedom and faith.

**Global Election Integrity and Control**

Dr. Frank then discussed the global effort to protect election integrity. He argued that election problems arise primarily from centralized state control, not simply from local election clerks or voting machines. He said county clerks have little direct control because they access a centralized state database in the cloud, much like the remote terminals connected to mainframe computers in the 1970s. Dr. Frank called for restoring local control through transparent, auditable systems and noted that he has developed a free solution to support that goal.

**Colorado Voter Roll Data Analysis**

Frank presented data on Colorado's voter rolls from 1980 to present, explaining how the state's voter registration system changed from local control to a centralized state database in 2010. He demonstrated that Colorado's voter rolls have grown faster than the population, with approximately one-third of registered voters being ineligible, and cited a recent Oregon lawsuit that removed 800,000 invalid registrations as evidence of similar issues in Colorado. Doug Frank emphasized that clean voter rolls should contain about 70% of the voting-age population, and warned that current registration rates above 100% indicate problematic voter rolls that could facilitate fraud.

**Chaffee County Voter Roll Issues**

Dr. Frank presented data showing that Chaffee County has problematic voter rolls, with more registered voters than actual residents and high voter turnout rates. He explained that the state, not local clerks, is responsible for significant changes to voter rolls through a process called "churn," with 92% of names changing over the last four years. Dennis recommended that county officials use clean voter rolls when mailing ballots to avoid federal legal issues and mailing costs, suggesting this could save money and reduce liability.

**Election Integrity and Voter Fraud**

Dr. Frank discussed election integrity issues, focusing on problems with mail-in voting systems and data analysis showing suspicious voting patterns in Coos County, Oregon. He examined specific addresses and identified potential cases of voter fraud, including instances where multiple people at the same address were receiving ballots and cases where a Christian camp reported 30 votes despite having few residents. He emphasized the importance of in-person voting to maintain election integrity and shared a story about discovering 2,000 dead voters in 2021, which led to a discussion about signature verification processes with a county clerk.

**Election Integrity Data Review**

Our Chaffee County data showed significant issues with voter rolls, including 20% of registered voters having moved away and 30% being problematic overall. He advised against pursuing unaffiliated voters and recommended focusing on getting Democratic and Republican voters to the polls instead. Dr. Frank has developed a seven-step approach for improving election integrity, emphasizing the need for local teams to work together strategically rather than acting alone, and offered to help form such a team in the area using this program and his roadmap.

**Voter Roll Cleaning Strategy**

Doug Frank presented a strategy to build a movement focused on cleaning voter rolls and addressing election fraud by engaging with county commissioners and clerks. He emphasized the importance of reporting fraud weekly and forming local committees to work with counties, citing potential cost savings and improved election security. Dennis also discussed President Trump's support for this effort and shared insights on election security issues, while encouraging attendees to organize and take action in their communities.

**Collaboration**

- Attendees interested in forming a team: Sign up on the sheet provided to join the grassroots election integrity team.
- Newly formed team: Contact Dr. Frank to set up a meeting and begin organizing a strategy for local election reform.
- Newly formed team: Meet regularly with county commissioners, sheriff, and clerk to present evidence of voter roll issues and advocate for local control of elections.
- Chaffee County Clerk (if approached by attendees): Consider cleaning voter rolls using Dr. Frank's free resources before mailing ballots to avoid federal liability.

**Attendees:**

| Last Name | First Name(s) |
|---|---|
| Clark | Blane and Cathy |
| Confer | Bill |
| Dow | Chuck and Joni |
| Farber | Jake and Karen |
| Gray | Margie and Bob |
| Harnish | Bea and Wrex |
| Heap | Dennis and Bonnie |
| Heckman | Ruth and Rich |
| Hoppen | Pete and Susie |
| Kirwan | David |
| Kostelic | Mark |
| Linke | Cal and Carole |
| Lively | Diane |
| Martelaro | Anna |
| McWane | Becky |
| O'Connell | Krystal |
| Seeling | Alan |
| Strader | Connie |
