

FR Clear Spray Coating for Plants

This fireproofing spray is a special fire retardant formula designed to protect artificial Christmas trees, and other artificial foliage and decorations. It is a clear, intumescent top-coat. For nursing homes, schools, day cares, malls and other public buildings that are required to meet Life Code 101 standard. One quart will treat one typical five-foot tree. Comes with documentation for fire marshal.

- NFPA 701
- Clear top-coat
- Designed to meet Life Code 101

Spray outside or in a well ventilated area. Product has a strong odor. Use standard trigger sprayer on mist setting. Spray liberally, working from the inside (close to the trunk) to the outer branches, and from the bottom up. Allow to dry and cure completely before bringing back inside.

Coverage: For artificial foliage, apply three (3) light coats at 1050 sq. ft. per coat with the final coverage rate of 350 sq. ft. per gallon. Thinner coats work better than a single thick coat, and reduces bloom and improves drying time.

FIRE RETARDANT COATING SURFACE BURNING CHARACTERISTICS OF APPLIED COATING

Flame spread	0.0 - 5
Smoke developed index	190
Number of preliminary coats	None
Rate per coat (ft ² /gal)	200
Number of fire retardant coats	1
