Providing the complete electronic document solution.

With ELO's Business Solution - DocuSign, you now have the workflow power of ELO for document creation and approval, with the additional functionality of DocuSign electronic signature for both internal and external signatories.

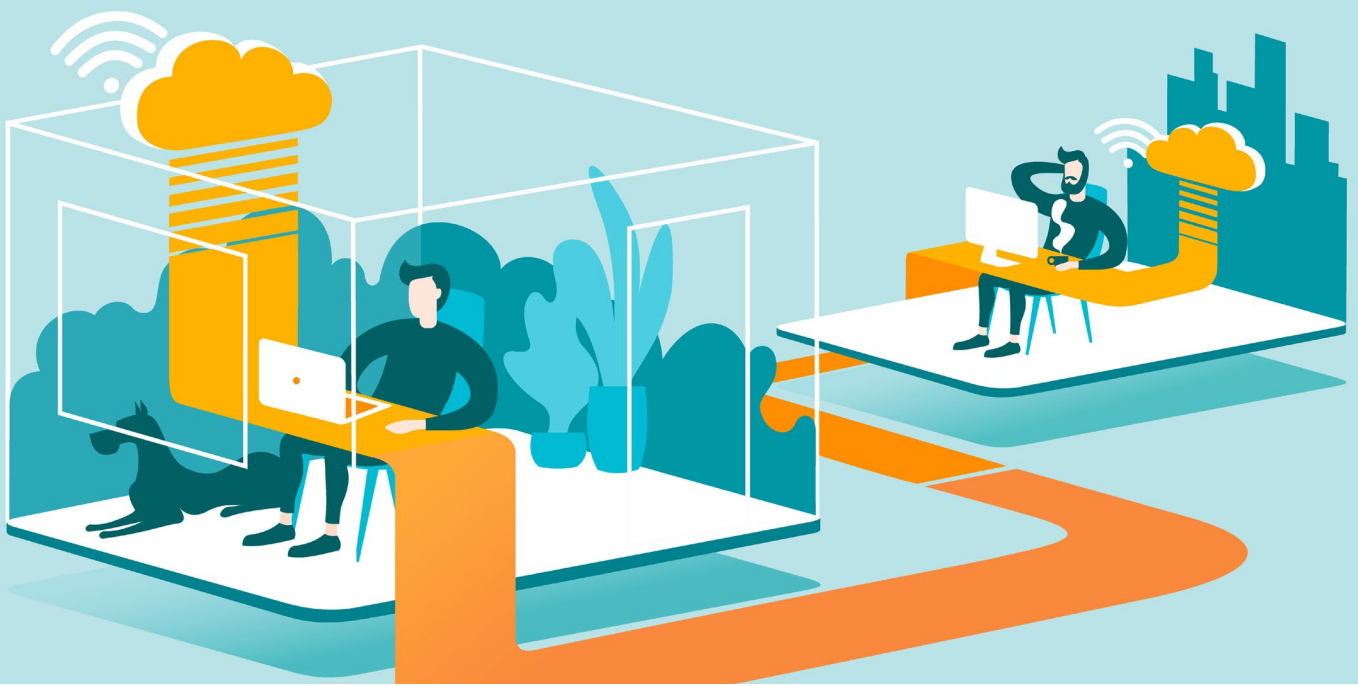

Easily create contracts, offers, agreements and any other electronic documents within ELO's system. Then simply add a DocuSign workflow, with the click of a button, to easily send the document electronically to the required signatories for review and signing.

Once the document has been signed, the document is automatically updated within your ELO software suite, where it is securely stored and easily accessible. All metadata and tokens are updated on the fly.

There is now no need to physically produce legally binding documents in paper format, get them signed by all required parties and then scan them back into your document management solution. ELO and DocuSign help you to remove the requirement for paper document creations and storage.

ELO & DocuSign
Removing the last frontier of paper documents.

DocuSign®

The benefits

Secure business faster

ELO document creation and DocuSign speed up the process of getting contracts created and signed quicker.

Secure information exchange

DocuSign provides your customers, partners and staff with the secure submission of business sensitive information.

Electronic Signature Compliance

DocuSign is more than an unrecognisable scribble on a document, it ensures your documents are legal and enforceable in common law jurisdictions. All documents are digitally sealed with industry standard technology that indicates the electronic signature is valid and the document has not been tampered with since it was downloaded from DocuSign.

Simple and intuitive design

ELO users can easily send a document to required parties for signing, by simply clicking the digital signature button within the **ELO** ECM suite.

Automatic updates and notifications

ELO automatically updates the stored document with the latest version of the electronically signed document. **ELO**'s embedded workflow engine can also be set to notify you when the signed document has been received.
