## CENTRAL VISION LOSS

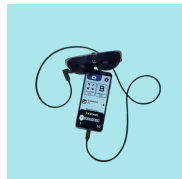

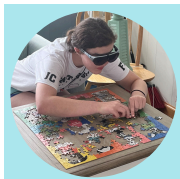

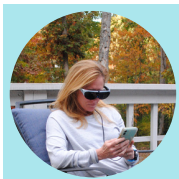

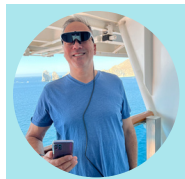

I use the glasses every day for reading...email and other social media, woodworking, and playing musical instruments...Ivy also reads and summarizes information for me. I would tell everyone that has a vision problem or situation that Eyedaptic is a company that is on the forefront of low-vision solutions.

## EASY TO USE

"I'm so excited I could almost cry, I am pumped to use this tool to make my life better!"

## VISION AID

Eyedaptic has improved the quality of my life by allowing me to do normal functions around the house such as operate the microwave, read labels on medicine bottles, and be much more aware of my surroundings.

## WHO BENEFITS ?

**"The shocking emotional response of our patients when they try these on for the first time was enough to convince me that these glasses are the future of low vision devices."**

David Almeida, MD MBA PhD  
Ophthalmologist (Retina Surgeon)

Eyedaptic Glasses improve the vision of those suffering from retinal disorders including AMD (age related macular degeneration) through the development of software driven smart glasses, leveraging the power of augmented reality (AR) and artificial intelligence (AI) technology.
