

One-way Door Excluder

Our One-Way Door Excluders allow unwanted wildlife to leave a structure on their own. The 4 hinged flanges allow installation over the access hole and the spring-loaded door allows animal to easily exit the structure but prevents them from returning.

Directions: Place the One-Way Door Excluder access point (*opening closest to the flanges*) over the access hole. Open the flanges and place them flat against the sides of the structure. Using screws & washers or heavy-duty staples, secure each flange panel to the structure. Ensure unit is strongly secured so that as animal exits the Excluder, unit holds animals' weight.
