

A new, different way to energise your power supply

We don't just want to lower your energy costs, we will do it in an ethical way reducing your companies carbon footprint by using renewable energy supply.

Three simple steps to lower bills and reducing your carbon footprint:

STEP

1

Simply click on
www.utility-works.co.uk
and download the **Letter of
Authority**, copy and paste onto
your letterhead and send to
enquiries@utility-works.co.uk
as a pdf or jpeg or by post to our
office. We require this to collect
all relevant data from your
current energy supplier(s).

STEP

2

We will carry out a review
of your current costs and supply
showing how you can lower
your energy bills.

STEP

3

Once you are happy with this
we will then secure the
'greenest', low carbon supply to
satisfy your needs.

A forward looking relationship

Achieving our aims with you as a customer is only the beginning. Climate change is a reality and all businesses have a corporate responsibility to help meet carbon reduction targets.

We feel that this responsibility will soon become a statutory demand and Utility Works are in the unique position to 'future proof' your company with renewable supply.

- › We carry out energy efficient installations
- › We offer sustainable supply
- › We offer real time constant monitoring
- › We offer Business Energy Funding for renewable energy projects

And perhaps most importantly of all we offer a first class customer service with named person contact who will be your partner in energy management.

Utility Works are the renewable energy specialists

We have four simple aims

- › To reduce your energy bills
- › To do this using renewable energy sources
- › To reduce your companies carbon footprint
- › To offer first class customer service and information

Simple aims that as you might expect require a myriad of services and systems, that we have developed with our key partner suppliers. This has allowed us to become your 'single energy solution'.
