

FESTIN POUR LE SOL • FEAST FOR THE SOIL

## Liquid seaweed MIX

Growth supplement  
with biochar

Rich in potassium and magnesium

0 - 0 - 5

**1,5%** Mg

Efficient at plantation and in  
maintenance

---

IDEAL  
FOR  
ALL  
PLANTS

## PRODUCE HEALTHIER AND MORE PRODUCTIVE PLANTS!

- Liquid concentrate liquid
- Contains phytohormones and biostimulants
- Rich in potassium, magnesium and biochar
- Application by in ground groun irrigation or as a foliar spray
- Promotes bloom and fructification
- Authorised for organic cultures

---

**Ingredients:** Seaweed (*ascophyllum nodosum*) meal, biochar, magnesium sulfate, potassium sulfate.

---

# INSTRUCTIONS

## Application rate and frequency.

For all crops. Shake well before using.

**Foliar application:** Dilute 5ml/L. Apple every 2 to 3 weeks.

## Application rate and frequency.

Rooting seedling & growth phase: 0,5ml/L, 1 to 2 times per week

Bloom: 5ml/L, 1 to 2 times per week

Vegetable & ornamental plants: 5ml/L every 2 to 3 weeks

Can be mixed with other fertilizers for a complete fertilization program.

\*Best used within 24 hours of mixing.

**\*STORE AT 8 TO 30 °C IN SHADED PLACE.**

# Liquid Seaweed MIX

## WHY USE THIS PRODUCT?

Concentrated kelp extract is issued from a unique manufacturing process that allows a maximum conservation of phytohormones and other biostimulants which also enriches it with minerals and biochar.

## BIOSTIMULANT

The seaweed, *Ascophyllum nodosum*, grows in the St. Lawrence estuary. It produces a mixture of hormones that allow it to thrive in a difficult environment. The **CARENCE LIQUID SEAWEED MIX** will help your plants avoid stresses such as spring cold, heatwaves, drastic pruning, stopping growth due to a change in temperature, etc.

## NUTRITIOUS :

**CARENCE LIQUID SEAWEED MIX** contains trace elements which stimulate life in the soil and thus plant growth. The potassium and magnesium will support the plants in the ripening of the fruits.

## ANALYSE MINIMUM GARANTIE

Nitrogen	0,01%
Phosphore P2O5	0,007%
Potassium soluble K	5,61%
Magnesium	1,5%
Calcium	0,05%
pH	9

## BIOCHAR :

Biochar is plant-based charcoal that provides the nutrients necessary for microorganisms.

At **CARENCE**, we select natural products that contain nutrients for the plants in order to create quality fertilizers. Roots and soil make up the stomachs of plants.

This is why our fertilizers are incorporated into the soil to be digested by the microorganisms present in it in order to nourish them well and thus create a long-term effect. Plants can also receive these nutrients through their foliage. We recommend doing a foliar spray for a quick effect.
