

## **XCo Selects MKT Metal Manufacturing to Produce and Market the XCo Flow Controller**

XCo and MKT Metal Manufacturing of Pennsylvania have entered into a manufacturing agreement whereby MKT will manufacture the XCo Flow Controller (XFC) technology and associated ductwork and ancillary components for distribution along the eastern seaboard, including New England, the mid-Atlantic states, to South Carolina.

The XFC focuses on dramatic HVAC savings in high ceiling facilities conditioned with RTUs. MKT's President, Ken Brown stated, "This is a great opportunity to provide current and new customers with a technology that will help improve not only their bottom line with significant energy savings but improved indoor air quality and comfort for the customers and employees. MKT is proud to be a partner in developing this new technology for high bay manufacturing, big box and warehouse facilities."

"Entering into this agreement with MKT is a great opportunity for XCo because MKT can offer the full bill of materials for a site and their quality is unsurpassed" said Doug Newcomer XCo's CEO.

### **About the XCo Flow Controller**

The XFC demonstrates dramatic HVAC efficiency gains of ~30%+ which can equate to ~10%+ overall utility cost reductions for buildings with high ceilings and forced air heating and cooling.

- Exceptional ROI
- Improved indoor air quality
- Qualifies for utility rebate programs
- Third party verified by the University of Maryland
- Qualifies for 100% "bonus" depreciation in year one
- In greenfield designs or retrofits, reduced RTU count and lower capital expenditures
- Supports GHG reduction and sustainability goals with increased employee/customer comfort
- The XFC uses conventional HVAC construction materials and easily integrates with existing HVAC rooftop units (RTUs) and building controls
- Simple, reliable, and long-life installation
