BETTER FOR YOUR BODY, Better for Your Game

Play like a champion

An analysis of the world's top tennis players shows that most had extensive clay court training in their formative years. The United States Tennis Association (USTA) encourages promising players to train on clay courts, and has installed Har-Tru courts at all of its national training centers.

Reduce injuries

Har-Tru clay courts let players slide and recover under control, instead of slamming onto a hard court and absorbing the shock in their body and joints. The clay acts as a cushion. Feet slide and pivot freely, which greatly reduces the chance of injuries. Studies have shown that clay surfaces create *seven times fewer injuries* than other courts.

Refine core skills

Clay courts are a learning environment where players continually broaden, test, and refine their skills. Har-Tru courts provide a slower ball bounce, resulting in longer rallies, a greater variety of shots, and a more controlled game. Players develop footwork and balance, physical and mental endurance, and the ability to construct shot sequences that become points.

Pickleball on clay

As with tennis courts, our green clay is a healthier and safer surface for pickleball. The game slows down slightly and gives players the chance to refine their shots and strategies. Courts can be dedicated to pickleball, or use blended lines for both tennis and pickleball.

Play for a lifetime

Most tennis players play for life — from the time they're young until their retirement years. Clay courts are ideal for devoted players because they reduce the risk of injury, develop endurance, and allow players to be on the court all day, every day.

Trusted Advice and Assistance From the World's Leading Expert on Clay

Har-Tru has manufactured exceptional courts and equipment for nearly 100 years.

Our knowledgeable associates advise owners, clubs, and other professionals on the latest court technology, construction materials, and installation methods.

Our support and resources are available during all phases of purchasing, installing, and owning a Har-Tru court.

Har-Tru Tennis Court Material Blends

HAR-TRU® Green Clay | [The world's leading clay court surface](#)

HAR-TRU is made from billion-year-old Pre-Cambrian metabasalt found in the Blue Ridge Mountains of Virginia. It's a natural green stone that is extremely hard and angular.

The angularity helps the stone particles lock together to form a stable playing surface. The hardness provides exceptional durability. Our stone is crushed, screened, and mixed in precise proportions. It is then installed over a porous base of crushed stone aggregate to produce a court with less maintenance and greater consistency.

Surface Blends

HAR-TRU

Classic clay court surface material with binder. For use on Har-Tru courts with sprinkler systems.

HAR-TRU Coarse Blend

For indoor and outdoor sub-irrigated courts where extra coarseness and sliding material are needed.

HydroBlend

Clay court surface material designed specifically for use with sub-irrigated tennis courts.

Three Ways to Construct a Clay Court

Traditional | [The Classic Clay Court](#)

Har-Tru is the standard of excellence in clay court tennis. Our courts provide a slower ball bounce than other surfaces, which results in longer rallies, fewer injuries, a greater variety of strokes, and a more controlled game.

Traditional Har-Tru courts are less expensive to construct than other types of tennis courts, require regular maintenance, and are watered from above ground.

Subsurface | [Automated Irrigation](#)

HydroCourt® is a subsurface-irrigated court that provides a uniform surface, requires little maintenance, and has no downtime from sprinkler activities.

The HyQ® Court takes the system even further with a digital control box and the ability to control the system through an app from anywhere in the world.

HydroCourt and HyQ are fully-adjustable, self-regulating, underground watering systems.

All Weather | [Real Clay, Low Maintenance](#)

ClayTech® is a high-performing, hybrid clay court that provides the look and feel of clay with much less maintenance. This surface utilizes a specially designed mat that acts as the base for a thin layer of European red clay or green HAR-TRU.

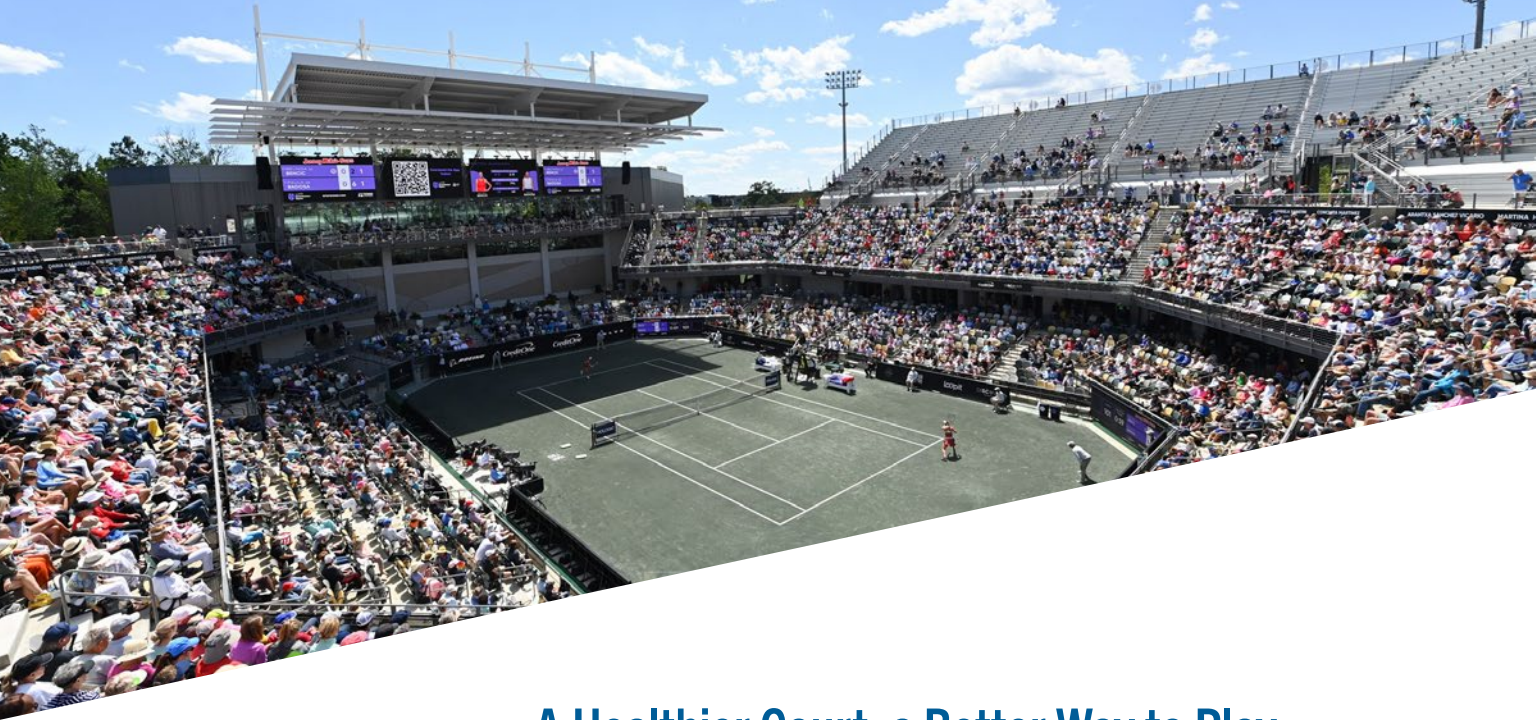

ClayTech courts combine the benefits of clay with the low maintenance of hard courts.

Har-Tru European Red [A deep red statement](#)

European Red Clay creates a remarkable court that evokes emotion. The rich, red clay is ideal for top-dressing existing clay courts or covering red ClayTech courts. The classic red surface requires regular upkeep but leaves a striking impression.

European Red Clay adds a distinctive beauty to any property. Our blend is produced from crushed bricks and is imported from Europe in 55-lb bags.

A Healthier Court, a Better Way to Play

HAR TRU

The world's premier
manufacturer of court
surfaces, equipment,
accessories, and supplies.

Har-Tru clay courts dry quickly and are environmentally safe. They leave no chemical waste, absorb water, solve run-off control issues, and get players back on the court quickly.

New installations and court conversions are easy and cost efficient. A technical consultant can be on-site before, during, and after installation. Maintenance takes as little as 15 minutes a day.

- Easily installed and maintained
- Promotes core footwork and balance skills
- Teaches players to succeed on any surface
- Develops strength, fitness, and endurance
- Soft, sliding clay reduces common injuries
- With proper maintenance, clay courts will last for decades

If you haven't had the clay court experience, you owe it to yourself, your friends, and your club or community to learn about Har-Tru.

Har-Tru is the official clay and subsurface irrigation supplier of the Home of American Tennis at the USTA National Campus.
