If you like tennis, you'll love this court

HyQ® is a revolutionary irrigation system that uses digital technology to continually monitor and adjust the water in your court. Precise, controlled, and efficient — the HyQ system is the foundation for the world's most advanced clay tennis courts.

- Reduced water usage
- No downtime for sprinkling
- Less surface loss from wind and erosion
- Lower maintenance costs
- Quickly drain courts after a rain
- Easily adjust and customize water levels
- Mobile app controls court remotely
- Consistent playable surface

Har-Tru works with trained independent contractors, authorized builders, and experienced installers. We advise owners, clubs, and other professionals on the latest court technologies, standardized construction materials, and installation methods. Our support and resources are available during all phases of purchasing, installing, and owning a Har-Tru court.

Precise, Controlled, Efficient:

THE ULTIMATE CLAY COURT EXPERIENCE

Most clay tennis courts require daily watering from a sprinkler system. The HyQ® subsurface irrigation system waters the court automatically from beneath the playing surface — conserving water, reducing downtime for maintenance, and creating a consistent playing surface.

Har-Tru subsurface irrigation systems are installed in facilities across the world, including the USTA National Campus, Credit One Stadium, and the All England Lawn Tennis and Croquet Club.

The HyQ system (*pronounced High-Q*) introduces digital technologies that make it the most advanced tennis court irrigation system of its kind.

It continually monitors and adjusts the water levels in your court. The system is self-regulating, fills the court quickly, and adjusts water levels to within one-tenth of an inch.

To enhance your HyQ experience, it is highly recommended that you connect the system through wi-fi. Ensure that you have internet access reaching your court, connect the digital HyQ control panel to the internet, and gain access to your court's performance.

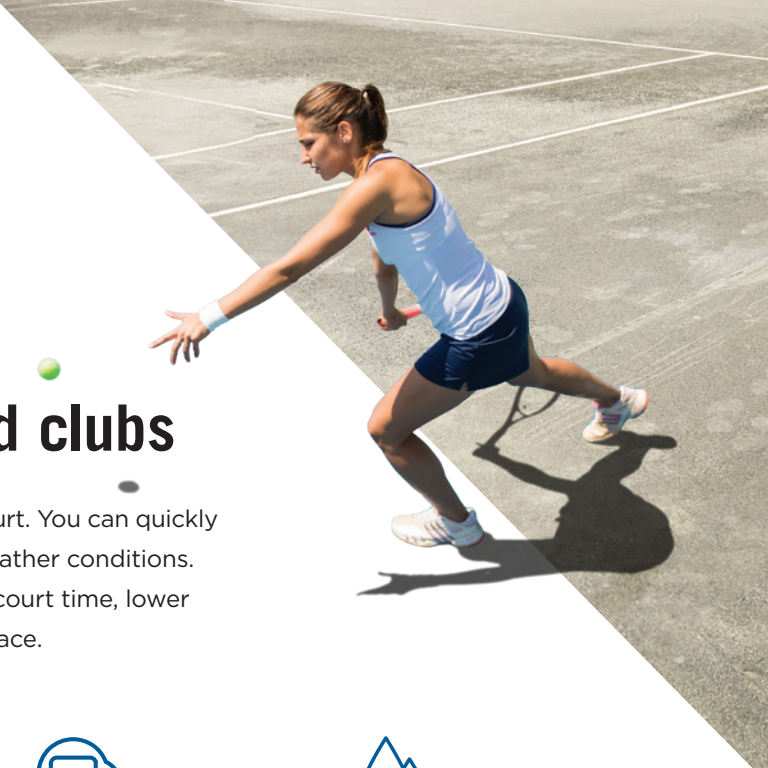

Simply download the HyQ app, set up your free account, and begin monitoring and controlling your court from anywhere.

HyQ eliminates sprinklers and manual water valve adjustments and replaces them with precise digital settings. With the push of a button, you'll keep your clay court in consistently excellent playing condition.

COURT

A win-win for players and clubs

With HyQ, it's easy to see what's happening on your court. You can quickly identify water usage and make adjustments for local weather conditions. You'll automatically use less water, gain more available court time, lower your maintenance cost, and create a better playing surface.

Zero downtime for sprinkling

You never have to close a court while you wait for sprinklers. Your court maintains a consistent playing surface throughout the day.

Digitally accurate adjustments

Adjustments are made to within 1/10" — you simply press a button to adjust up or down. Digital sensors easily and accurately read the water level.

Mobile app controls from anywhere

The HyQ mobile app allows you to remotely monitor and adjust your court with complete confidence — anytime, from anywhere in the world.

Uses less water more efficiently

Economical in every way, HyQ decreases water usage while simultaneously making it easier and more efficient to control.

“The HyQ system is the best in the world.”

— Bob Moran, President, *Beemok Sports and Entertainment*
