

Why QUARTZPORT® Is Perfect For Counter-tops?

-  Virtually non-porous, this surface can resist staining caused by coffee wine, lemon juice and others daily products
-  Made from one of the hardest natural materials, quartz stone is highly resistant to impact
-  Quartz is one hard material in existence and makes sure our products are really durable
-  Quartz Stone, because it's made of quartz, is highly resistance to scratch.

LOOKS NATURAL, BUT MORE THAN NATURAL

Quartz is one of the hardest, most abundant minerals found in nature – only diamond, sapphire and topaz are harder. Besides beauty, the quartz gives the worktop extreme strength, making the surface highly scratch-resistant. Quartz work surface are made from crushed pure natural quartz and combined with a small amount of pigment and resin to create a slab of uncommon beauty and strength. This combination of materials allows Quartz to be a dense, non-porous stone that delivers unsurpassed reliability and performance – scratch-resistance and stain-resistance with no sealing required in a large variety of naturally beautiful, consistent colors.

	Quartz Surfaces	Natural Stone	Laminate	Solid Surface
Scratch Resistant	●●●	●●●	●●	●
