

**Efficient Dispatch.  
Smoother Operations.**

Powered by:

AlMatar Taxi Software is a platform designed to revolutionize the management, operation, and organization of taxi dispatching and waiting processes within airport premises. Developed by PAESUK Ltd., the AlMatar Taxi software builds upon successful implementations in major transport hubs worldwide, addressing the unique challenges of airport taxi operations with innovative solutions tailored to meet new requirements.

- The Advanced Dispatch Management system efficiently coordinates the movement of taxis from the hub waiting zone to airport terminals, responding dynamically to real-time demand and taxi availability.

- Designed with passenger in mind, the application streamlines the airport experience while boosting efficiency and customer satisfaction

- Automatic Number Plate Recognition (ANPR) cameras and RFID readers provides continuous, real-time tracking of all vehicles within the airport premises.

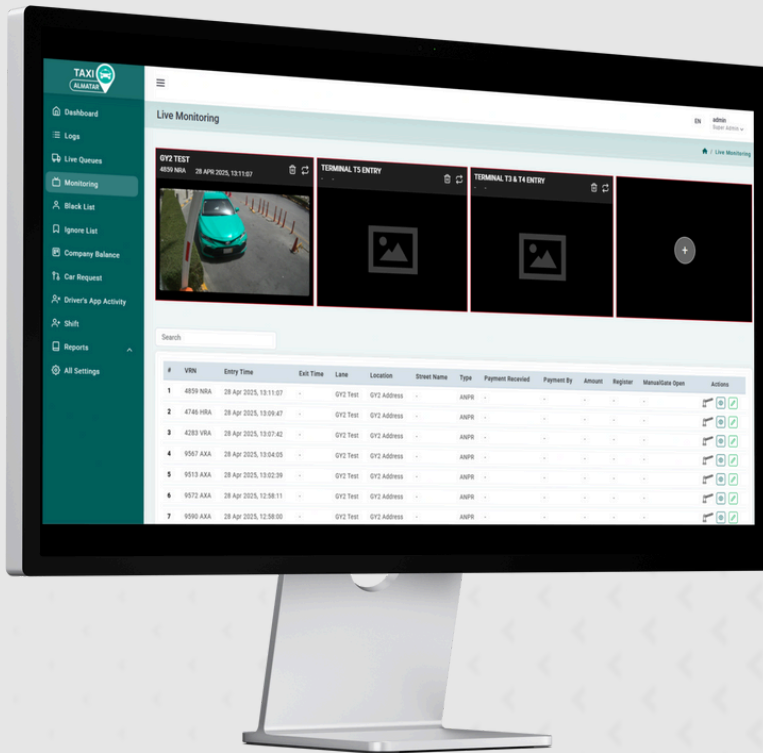

## Backoffice

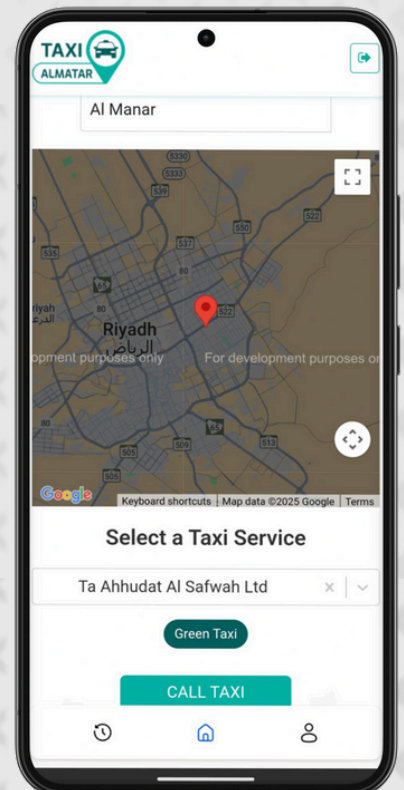

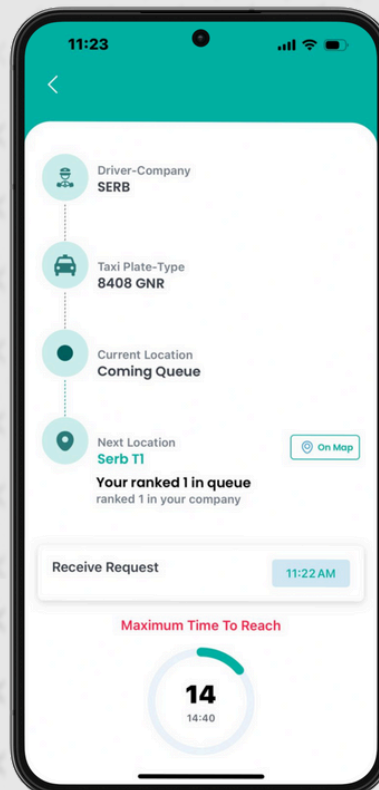

Backoffice:

- Serves as the operational hub of the AlMatar taxi dispatch ecosystem. Offering complete visibility and control over taxi operations, it centralizes dispatch management, live vehicle tracking and queue oversight, leveraging technologies such as ANPR cameras and RFID.
- A built-in e-wallet and performance dashboards provide financial transparency and actionable insights.
- Direct communication tools and instant notifications ensure drivers stay informed and supported

## Driver and passenger app:

- The Driver Application streamlines airport taxi operations for drivers. It offers:
  - automated gate entry,
  - dynamic queue management,
  - real-time job assignments
  - integrated navigation,
  - e-wallet for cashless transactions
 helping drivers minimize wait times.
- The Customer Application is a platform that enables passengers to request a taxi, enter their destination, and receive details about their assigned taxi and estimated arrival time. It streamlines the booking process and provides a printed invoice for each trip.

## Key Benefits

- Efficiently manages taxi dispatch and allocation, reducing wait times and congestion.
- Supports seamless, secure cashless transactions with multiple payment options and automated reporting.
- Company Dashboard gives operators secure, independent control over their operations.
- Cloud-based design ensures the system is reliable, scalable, and ready for future enhancements.
- Live monitoring to improve airport security and safety

## Key Features

- Real-time monitoring and advanced access control ensure secure, automated vehicle and driver management.
- Driver mobile apps and customer feedback channels enhance service quality and satisfaction.
- Live dashboards and analytics provide actionable insights for better operational decisions.
- Open API allows easy integration with airport and third-party systems.
- Enables quick vehicle reassignment to adapt to changing needs.
- ANPR & RFID integration enables fast, contactless vehicle and driver authentication for secure entry, exit, and real-time tracking.
