

Enbridge Gas Inc. Notice of Upcoming Project

Mississauga Reinforcement Project

This notice is to inform you of an upcoming Enbridge Gas Inc. (Enbridge Gas) project in the City of Mississauga and Town of Oakville. The purpose of the project is to accommodate, in part, a transition from other fuel sources to natural gas for existing Enbridge Gas customers.

The project includes the construction of natural gas pipeline in the City of Mississauga and Town of Oakville, as well as the rebuilding of some existing natural gas customer stations located on the customers' properties. Depending on the route chosen, the pipeline would be between approximately 0.3 km and 3.1 km in length. The project is planned to be constructed mainly in the existing municipal road allowance and on customer properties; additional temporary working space may be required for equipment movement and storage, and excess soils management.

Enbridge Gas has hired a third-party environmental consultant, Stantec Consulting Ltd. (Stantec), to complete an environmental study for the project. The study will be conducted in accordance with the Ontario Energy Board (OEB) "Environmental Guidelines for the Location, Construction, and Operation of Hydrocarbon Projects and Facilities in Ontario, 8th Edition (2023)" and will include a consultation program, impact assessment, and a cumulative effects assessment.

An Environmental Report is scheduled to be completed in Fall 2024, after which Enbridge Gas plans to file an application for the project with the OEB. Review and approval by the OEB is required before the proposed project can proceed. Construction could begin as early as Q4 2025, pending OEB approval.

Enbridge Gas is committed to undertaking consultation and engagement with stakeholders and Indigenous Nations as an integral component of the planning process. Additional details regarding the project and how to become involved during the consultation and engagement process will be provided in future correspondence. If you have any questions or comments during the development stages of this project, please contact the undersigned. Input will be evaluated and may be considered within the route evaluation for the project.
