

Oelwein Family Aquatic Center Shelter and Fencing

Build a 20ft. x 20ft. pole frame shelter with hip roof with decra shingles to match existing roofs on existing concrete slab. Two-foot roof overhang with soffit and fascia to match aquatics building colors as close as possible. Install blocking above headers between roof trusses to deter birds from building nest in soffit. Remove fencing that is no longer needed. Build fence across the backside of shelter, move gates. Use removed fencing to build fence in new areas. Pour concrete back in areas that will need to be cut out for building and fencing construction.
