

# Line Replacement Service

## Digitally transform your analog lines.

Major telecom providers continue to escalate the underlying costs of "plain old telephone service" (POTS) lines. Since the cost of copper continues to increase, these outdated lines are getting more and more expensive. Now, enterprise companies have an easy, cost-effective way to transition to new digital communication solutions. MetTel's Line Replacement System enables any company to seamlessly move from old, legacy telephone systems to new IP/4G LTE solutions. It's the simplest way to move away from outdated and expensive analog lines while keeping their special functionality.

## Key Benefits

Our new service will seem just like a landline phone; any application functionality that requires a traditional wireline dial tone-based circuit may utilize our Line Replacement Service for connectivity.

MetTel's delivers a fully bundled solution including installation, hardware, and software so your phones can be up and running with little to no effort.

Instantly make calls with our fast and reliable bidirectional VoIP call completion technology.

Within seconds you can be digitally transformed and realize immediate ROI.

## Features

### SINGLE DEVICE WITH MULTIPLE FUNCTIONALITY

Replace your existing POTS lines with our software-based solution. Serves as a wireless backup unit, keeping your business running when your primary circuit goes down.

### SUPPORTS VALUABLE POTS APPLICATIONS

- Voice
- E-911
- Fax
- Analog Data
- Ring-Down
- POS Terminal
- Burglar & Fire Alarm Transmission
- Vending Machines
- ATM Machines
- Telemetry Command & Control

**Cost Savings Estimated at 25%  
Immediate & Year-to-Year**

A firewalled Network Operating Center (NOC) routes cellular data received on our multi-carrier network to or from the PSTN, which enables ultra-safe call origination or call completion to occur.

Our plug and play technology creates a seamless transition to the fastest VoIP/4G LTE on the market.

Along with improved performance and reliability, you'll have enterprise-grade security and advanced analytics.

As with all MetTel products, you'll have access to our award-winning customer service.

## Features Continued

### MULTIPLE LINES SUPPORT

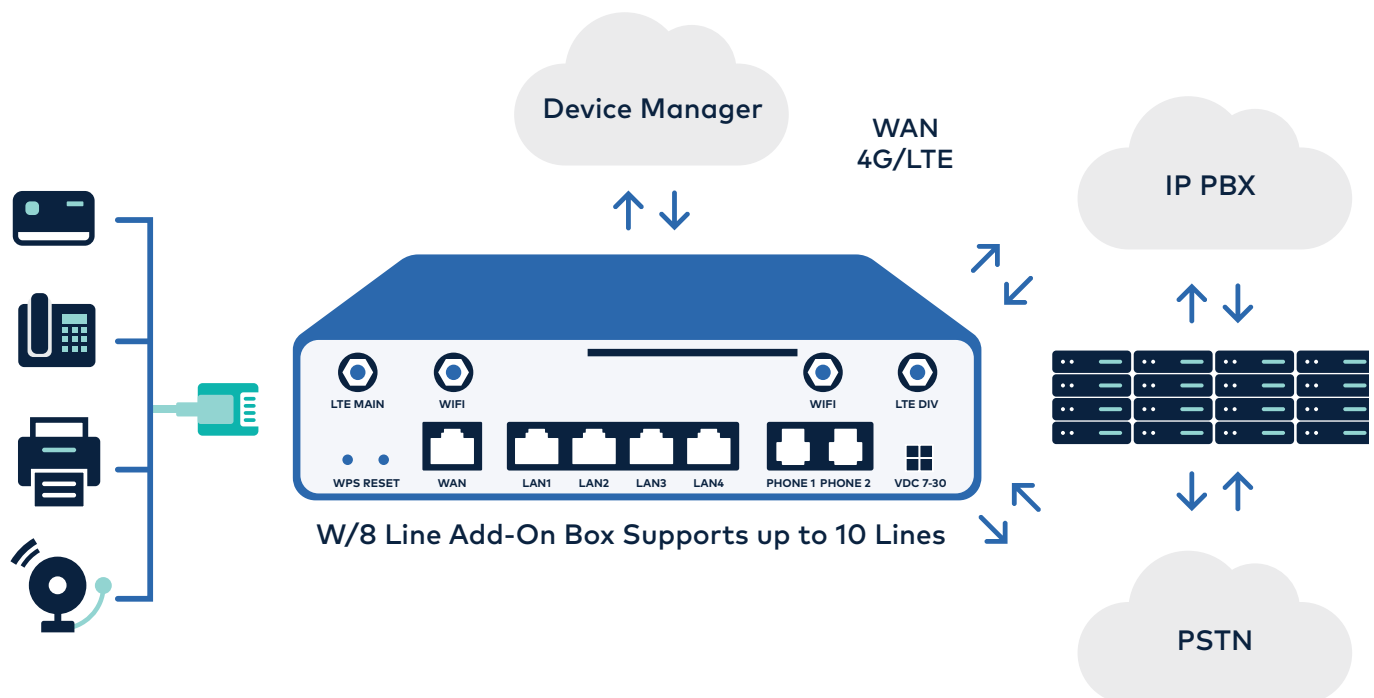

Switch out up to 10 POTS lines with each Line Replacement System device manager.

### OUR UNIQUE COVERAGE

- 99.5% 4G LTE coverage
- Cross-carrier pooling

## Line Replacement Network

Our Line Replacement System replaces existing wireline analog lines and permits uninterrupted, fast and reliable bi-directional Internet Protocol (IP)/4G LTE call completion. Any application functionality that requires traditional wirelines dial tone-based circuit may utilize our Line Replacement System for connectivity. Transmission options include ability for both cellular data channel and other alternative Internet access pathways providing true fail-over, diverse, alternative routing for calls. A fail over option is available for 3G cellular voice channel pathways.
