

Oil and Gas Case study

Project: Tyra redevelopment

The Tyra field is the largest natural-gas condensate field in the Danish North Sea. It has been in operation since 1984 and was originally two production complexes, which also processed gas from other fields.

In 2017, a redevelopment of the Tyra platforms called Tyra II (www.tyra2.dk/en) was announced, costing a total of 21 Billion DKK. Production is scheduled to start in 2023.

TotalEnergies is committed to the long-term development of the Danish offshore sector. The redeveloped Tyra will be a high-tech production and export center, that will secure gas supply for many years to come.

Real Safety have supplied safety solutions to Mærsk Oil and TotalEnergies since 2007 and for the Tyra redevelopment, we cooperated with EPC contractors: Rosetti Marino, McDermott International and Sencorp Singapore.

Real Safety supplied all safety Escape Route Markings and anti-slip solutions.
