

Case Study - Non-Slip Surfaces, Hot-Hed Middle East, Qatar.

INCA Trading and Contracting, the in-country distributors for Real Safety® high quality non-slip and other leading safety equipment are delighted that Hot-Hed Middle East have offered to bring awareness to the market of the benefits of this important safety product by agreeing to allow INCA to install non-slip stair treads and landing cover on a demonstration staircase in their facility in Birkat Al Awamer.

INCA Trading & Contracting visited the Hot Hed Middle East facilities on the 20th of January to install 13 pieces of FRP non-slip material, comprising:

- 5 stair treads with onshore grit.
- 5 stair treads with offshore grit. (To highlight the difference between the two surface options)
- 2 stair treads with safety message (at top and bottom of staircase).
- 1 landing cover.

The staircase in question leads from the ground floor to the first landing level, which provides access to the storage mezzanine floor.

These were installed as a demonstration stairway to allow Hot-Hed's visiting clients' to view and assess the benefits of implementing high quality non-slip surfaces in certain areas to further improve safety issues at their various locations.

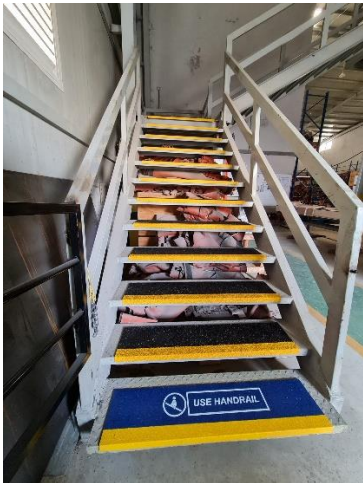

From start to finish the work was completed within 3 hours including unpacking the components, cleaning the staircase, setting out the installation, installing the tread covers and landing cover and clearing up the packaging by a team of two technicians. The staircase was handed back within 30 minutes of the last item being installed.
