

How to prepare for your visit

1. Your doctor has set a timeframe for your visit. He will try to be on time. Please be patient if he is running behind.
2. In order to make the visit efficient, we ask you to please fill the forms that were provided to you before the visit. That is information that your doctor is required to obtain from you, and if your forms are properly filled, we will have more time to speak about your medical conditions and how to improve your overall health. While they seem repetitive, they all have a purpose and are very important.
3. Please bring all your medicines and supplements. Also, a note about how you take them (number of tablets, times you take them, how long have you been taking them, etc.)
4. Make a list of the problems you are having and your questions. This way, you will not forget, and we can cover more information.
5. Bring the name, address and telephone number for your pharmacy. We are required to submit your prescriptions electronically.
6. We have identified professionals in the community that are experts in neurological care. We will gladly provide their information to you. If you are working with a team that you are happy with, please bring their information as well.
7. Be aware that we only prescribe or refills medication that we believe can help you, and we will not refill any medication that we believe may harm you. We do not prescribe narcotics or medications with addiction potential.
8. We will try our best to work with your doctors and keep them informed. Providing their correct contact information will help accomplish this.
9. Please add our telephone numbers, 407-572-7300 and 407-916-0304 to your contact list. This way, you will recognize when we call you about any question we might have or when we return your calls.
