

SBS Civil

Project Planning

Civil infrastructure planning and estimating for roads, bridges, and water systems. Design formats in Civil 3D, Solidworks and Pipe-Flo. Specialization in roads, bridges culverts, site work.

Environmental Support

Clean water systems, controlling air pollution, managing waste, and ensuring regulatory compliance. We offer site monitoring, risk analysis, technical support for remediation, and preparing environmental reports and permits

Surveying and Remote Sensing

Topographical surveys to map terrain, boundary surveys to establish property lines, and construction surveys for layout and as-built documentation. Soil and hazardous waste investigation support.

Site Work

Site preparations to include staking, clearing vegetation, excavating, soil stabilization and grading land, and preparing for utilities. Clean up contaminated sites, restoring them to a safe condition for reuse.

Horizontal Construction

Building and maintenance of infrastructure like roads, highways, runways, and taxiways, to include activities such as grading, paving, drainage installation. Remote construction operations for trails, boardwalks and bridges.

Demolition

Complete building removal, selective demolition of specific structural elements, and site preparation for future buildings. We collect, sort, and process construction and demolition (C&D) debris to recover recyclable materials.

CONSTRUCTION

We specialize in all crushing related work but our main emphasis is hard rock quarries, sand and gravel sources, screening and mixing, agglomerating and washing materials.

- 3/4" Road Base
- Drain Rock
- Sand
- Pea Gravel
- Fill material
- Top soil
- Recycled Glass
- Recycled Asphalt
- Recycled Concrete
