Eastpoint Water and Sewer District 2021 Annual Drinking Water Quality Report

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is ground water from two wells. The wells draw from the Floridan Aquifer. Because of the excellent quality of our water, the only treatments required are aeration and chlorination for disinfection purposes.

In 2021 the Department of Environmental Protection performed a Source Water Assessment on our system. The assessment was conducted to provide information about any potential sources of contamination in the vicinity of our wells. There are no potential sources of contamination identified for this system. The assessment results are available on the FDEP Source Water Assessment and Protection Program website at www.dep.state.fl.us/swapp or they can be obtained from Eastpoint Water and Sewer District at 670-8177.

If you have any questions about this report or concerning your water utility, please contact David Raffield at 850-670-8177. We encourage our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the third Tuesday of each month at 4:00 p.m. at the District office located at 40 Island Drive Eastpoint, FL 32328.

Eastpoint Water and Sewer District routinely monitors for contaminants in your drinking water according to Federal and State laws, rules, and regulations. Except where indicated otherwise, this report is based on the results of our monitoring for the period of January 1 to December 31, 2021. Data obtained before January 1, 2021 and presented in this report are from the most recent testing done in accordance with the laws, rules, and regulations.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife. (A)
- (B) Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses. (C)
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can (D) also come from gas stations, urban stormwater runoff, and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. (E)

In the table below, you may find unfamiliar terms and abbreviations. To help you better understand these terms we've provided the following definitions:

Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal or MCLG: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum residual disinfectant level or MRDL: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum residual disinfectant level goal or MRDLG: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

"ND" means not detected and indicates that the substance was not found by laboratory analysis.

Parts per billion (ppb) or Micrograms per liter (µg/l): one part by weight of analyte to 1 billion parts by weight of the water sample.

Parts per million (ppm) or Milligrams per liter (mg/l): one part by weight of analyte to 1 million parts by weight of the water sample.

Picocurie per liter (pCi/L): measure of the radioactivity in water.

2021 CONTAMINANTS TABLE								
Contaminant and Unit of Measurement	Dates of sampling (mo./yr.)	MCL Violation Y/N	Level Detected	Range of Results	MCLG	MCL	Likely Source of Contamination	
Radioactive Contaminants*								
Alpha emitters (pCi/L)	Oct 2015- Sept 2018	N	10.9 (avg.)	3.5-13.1	0	15	Erosion of natural deposits	
226+228 or combine radium (pCi/L)	Oct 2015- Sept 2018	N	4.0 (avg.)	ND-5.3	0	5	Erosion of natural deposits	
Fluoride (ppm)	Dec 2018	N	0.45	ND-0.45	4	4.0	Erosion of natural deposits; discharge from fertilizer and aluminum factories. Water additive which promotes strong teeth when at the optimum level of 0.7ppm	
Sodium (ppm)	Dec 2018	N	13	7.1-13	N/A	160	Salt water intrusion, leaching from soil	
Barium (ppm)	Dec 2018	N	0.024	0.021-0.024	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits	
Beryllium (ppb)	Dec 2018	N	0.2	0.2-0.2	4	4	Discharge from metal refineries and coal-burning factories; discharge from electrical, aerospace, and defense industries	

Disinfectant or Contaminant and Unit of Measurement	Dates of sampling (mo./yr.)	MCL or MRDL Violation Y/N	Level Detected	Range of Results	MCLG or MRDLG	MCL or MRDL	Likely Source of Contamination		
Stage 2 Disinfectants and Disinfection By-Products									
Chlorine (ppm) Stage 1	Jan-Dec 21	N	1.28	0.65-1.55	MRDLG = 4	MRDL = 4.0	Water additive used to control microbes		
Haloacetic Acids (five) (HAA5) (ppb)	Jul & Aug 21	N	57.2	52.9-57.2	N/A	MCL = 60	By-product of drinking water disinfection		
TTHM [Total trihalomethanes] (ppb)	Jul & Aug 21	N	71.4	69.82-71.4	N/A	MCL = 80	By-product of drinking water disinfection		

Contaminant and Unit of Measurement	Dates of sampling (mo./yr.)	AL Exceeded Y/N	90th Percentile Result	No. of sampling sites exceeding the AL	MCLG	AL (Action Level)	Likely Source of Contamination			
Lead and Copper (Tap Water)*										
Copper (tap water) (ppm)	Dec-21	N	0.35	0 of 10	1.3	1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives			
Lead (tap water) (ppb)	Dec-21	N	3.2	0 of 10	0	15	Corrosion of household plumbing systems, erosion of natural deposits			

Contaminant and Unit of Measurement	Contaminant and Unit of Measurement Dates of sampling (mo/yr)		Highest Result	Range of Results	MCLG	MCL	Likely Source of Contamination			
Secondary Contaminants*										
Color (color units)	Dec18 & May- Sept 19	Y	18	ND-18	N/A	Yes	Naturally occurring organics			

*Due to an administrative oversight in 2021, our office failed to sample for inorganic, secondary, synthetic organic, volatile organic and radionuclide contaminants and incurred monitoring and reporting violations. However, monitoring was completed in February 2022; these results will not be published until the 2022 Report is released, please contact David Raffield at 850-670-8177 if you would like a copy of these results. Additionally, we failed to conduct Lead and Copper Tap Monitoring during the required timeframe (June-September 2021) and we incurred a monitoring and reporting violation. We did monitor for Lead and Copper in December 2021 and in the January-June 2022 time frame and will continue to monitor in the July-December 2022 timeframe. We also did not monitor for Disinfection By-Products at one location during the required timeframe and incurred a monitoring and reporting violation. One sample was required for each contaminant, and none were taken during May 2021. These violations have no impact on the quality of the water our customers received, but the risk to public health is unknown. We have established a report tracking file to ensure that all monitoring and reporting requirements are met in the future.

In 2021 we failed to adopt or implement a written Cross Connection Control Program as required by Rule 62-555.360, F.A.C. The Eastpoint Water & Sewer District has since updated and implemented a written CCC Plan and submitted it to the Department January 05, 2022.

The State of Florida Department of Environmental Protection (FDEP) set drinking water standards for secondary contaminants and has determined that color is an aesthetic concern at a certain level of exposure. Color was sampled in May 2019 and was found at a higher level than allowed by the State (an MCL violation). This contaminant, as a secondary drinking water contaminant, does not pose a health risk. We will continue to sample as required by rule and work with the Department as needed.

The Eastpoint Water and Sewer District did not have lead levels above the action level. However, if elevated levels were present, it could cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Eastpoint Water and Sewer District is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

In order to ensure that tap water is safe to drink, the EPA prescribes regulations, which limit the amount of certain contaminants in water provided by public water systems. The Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water, which must provide the same protection for public health. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

We at Eastpoint Water and Sewer District would like you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. If you have any questions or concerns about the information provided, please feel free to call any of the numbers listed.
