

# WORKER SAFETY ALERT APP (LWA)

Our applications for isolated workers (LWA) transform your smartphones into an alert and location devices for your workers.

Our applications allow managers to have visibility on their workers and receive various alerts such as SOS, Fall detection, location, entry/exit of zones, sending photos directly to the portal, scanning QR codes for security patrols, travel history , etc.

This comparison sheet is a tool to help you compare the two mobile applications available. It allows you to identify the feature differences for each in order to make your choice according to your needs.

**Note:** A monthly service subscription fee applies for each user license

### Different applications to meet different needs.

**GLOBII** is mainly used for customers who are looking for an SOS alert button, paired with powerful GPS tracking, real-time travel history, QR scan history during security patrols, etc.

**WSAP** mainly targets worker safety with SOS alert button (on screen and external B-DOT), fall detection and event localization.
