Proton therapy treats prostate cancer with high success rates and low risk of side effects.

Treating prostate cancer with traditional radiation can carry a high risk of serious side effects, like loss of sexual and urinary function. Proton therapy allows physicians to deliver highly targeted, powerful doses of radiation directly to the tumor site, reducing damage to healthy tissue. With proton therapy, prostate cancer patients receive effective treatment, with low risk of side effects and improved quality of life.

The University of Florida Health Proton Therapy Institute currently treats:

T Stage

- T1
- T2a
- T2b
- T2c
- T3

PSA

- PSA <10
- 10 to <20
- ≥20

Gleason score

- ≤6
- 7 = 3 + 4
- 7 = 4 +
- 8
- 9-10

Risk category

- · Low
- Intermediate
- High

To learn more, and to find out if proton therapy is the best option for treating your prostate cancer, visit floridaproton.org/ppc/prostate-cancer-free, or call (877) 686-6009.

Proton therapy can be used to treat prostate cancer with high survival rates, low risk of serious side effects and excellent quality of life after treatment.
