

**Panel Finishing  
Equipment**  
*for an unsurpassed level of  
uniformity and quality*

---

*Up to 7200 sqf (720 sqm) per  
hour with single operator on a  
two station machine*

## PRODUCTION EFFICIENCY AND QUALITY

UNIFORMITY OF FINISH

LABOR REDUCTION

FAST

FINISHES NOT ATTAINABLE BY MANUAL PROCESS

100% WATER RECYCLING

*for Washing, Sandblasting and Etching*

*Over 40 years experience  
in precast panel surface  
finishing!*

There are two models of the machine:

- Straight Pressure Washing
- Pressure Washing with Brushes

Straight Pressure Washing offers the most flexibility for surface finishes

- Exposed Aggregate
- Sand blast wherein the sand is carried by the water under pressure
- Acid etch

Multiple finishes are possible in the same panel

***Over 40 years  
experience in precast  
panel surface finishing!***

Pressure washing with Brushes  
for Exposed Aggregate

The vertical and continuous movement between the panel brush and the front surface allows a rapid evacuation of removed material, preventing it from falling on the already washed surface

Moreover, the large contact surface of the brush allows for the use of low-pressure waterworks resulting in reduced maintenance

Finally, the brush's continuous transfer eliminates the phenomenon of the brush showing localized wear when processing panels of different width

With more than 40 years of experience, we are experts in plant production for surface treatment of concrete panels

Panel Finishing Equipment  
Will handle panels up to 3.65 m / 12 ft  
Wide and unlimited length

---

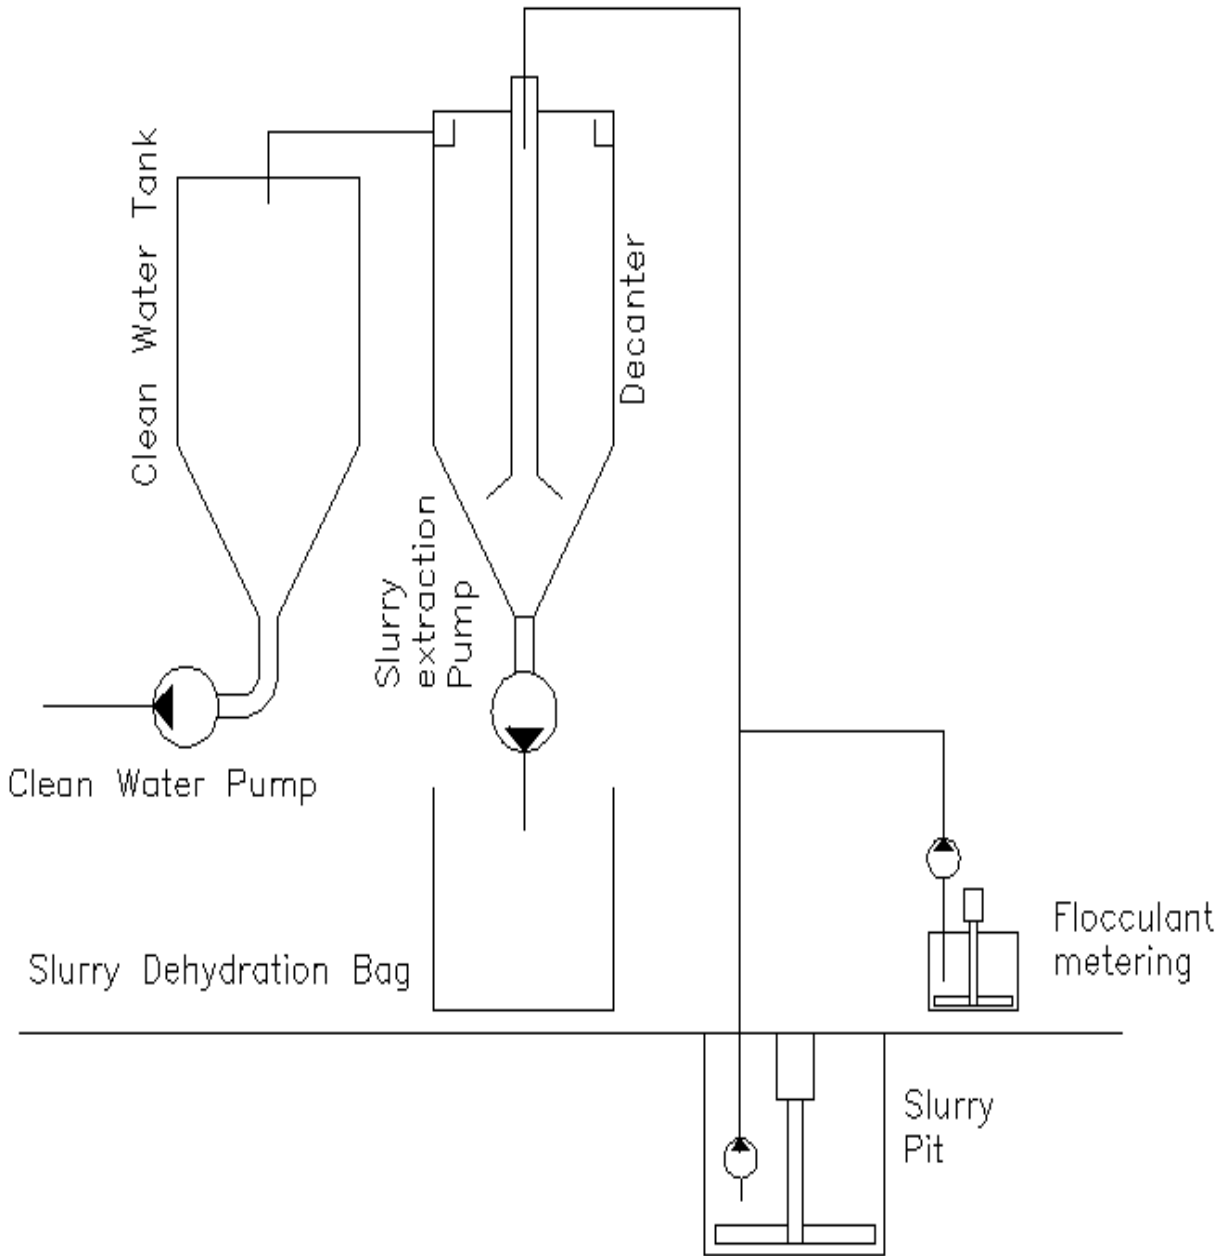

Panel Finishing Equipment  
Available in either a single station or  
a double station design for  
maximum production and efficiency

We also offer a Complete Panel Handling Solution - From the bed to the stockyard on either rails or rubber tires including finishing processes and water recycling
