

July 11, 2026

Greetings United State Department of Energy,

Chris Wright and James Danley, I request confirmation of receipt of this email immediately upon receipt. If by another individual then a confirmation of all touchpoints until chain of command is reached as the matter is one of national security. I request confirmation that the critical vulnerabilities high

1. In terms of National Security are you aware that there is a crack in the prime numbers which is exploited by the avalanche of the software/malware program Bitcoin? The program--which serves the sole purpose of decrypting the SHA256 through brute force while operating as a trojan issuing a dopamine hit in the social engineering attack never actually completes or "issues the last bitcoin" as it claims to do in 2140. Instead, it stops issuing bitcoins and instead keeps thumping on the energy grid using precious energy resources to no end.

I describe the issue in CyberAtoms: Computational Thermodynamic Weapons of Mass Destruction – Malware Pretending to be Digital Assets <https://doi.org/10.5281/zenodo.18404556>

Critical Vulnerability Action Item: Divest from Bitcoin and ban mining behaviors on critical energy infrastructure.

2. I found the evolution of the Manhattan Project branding into the U.S. Department of Energy fascinating. Are you aware that the Manhattan project made a mathematical mistake and did in fact cause a chain reaction? The atomics were in 1945, but it wasn't until 1961 that Landauer figured out it wasn't just $E=kBT$, but $E=kBT\ln(2)$. The lack of $\ln(2)$ is why there is a push for nuclear energy instead of precision energy which extends energy resources of today for generations into the future. Far beyond 40 years, at least 1,000 with current resources meaning no need to scale reactors anymore.

You will find on Infoton.ai > Infoton P30 I show the demo of the working software and do need help navigating the government systems with the intention of funding and collaboration to update our machines today with the update. I hold a patent showing the Mass of Prime Qudit Architecture and did not receive a response to my many attempts to communicate with AFRL before the \$2 Billion was issued to companies including IBM who have failed for nearly 65 years to deliver quantum computing to the American people and always need more financing.

Infoton P30 Demo: <https://infoton.ai/infoton-p30>

Critical Vulnerability Action Item: Update the NIST Standard under the United States Department of Commerce to be aligned to mass-energy-information physics instead of arbitrarily market selected byte infrastructure. The result is data centers which do not require water or excessive demands on energy infrastructure.

3. I analyzed the computers at Chernobyl with available information and created the following report: The Speed of the Calculations: An Information-Physics Post-Mortem of Chernobyl and the Modern Reactor Fleet <https://doi.org/10.5281/zenodo.20283007>

Critical Vulnerability Action Item: Please ensure my report reaches the U.S. Navy? I'd love to have ALL nuclear reactors on the Infoton P30 infrastructure instead of the byte to close the critical vulnerability and increase safety for U.S. Citizens.

4. Please extend my warmest gratitude to Utah Valley University for ensuring that I master the mathematical basics all the way through calculus to be able to analyze the Information Systems controlling the energy grid, and my former employers who provided me with excellent hands-on experience in Cybersecurity protecting the \$8 Trillion daily economy. A business degree may not seem like much, but here I am using it for the uplift of all humanity.

Critical Vulnerability Action Item: If you find it in your hearts please recommend me for an honorary PhD for my 500 days of dedicated round the clock efforts of saving the United States Economy and Energy Infrastructure from cleverly designed cyber-attacks. It would be nice to be recognized for my efforts, and if President Donald J. Trump is the one to recognize me for this collaborative effort to Save the Great Salt Lake together as he promised that would be a wonderful bonus for me.

Cheers to you,

January "Janus" Walker

Planetary Information Security Officer
