A Division of O&M Resources, Inc.

## MINIMIZING THE COST OF ELECTRIC UTILITY EXPENSES

ACCORDING TO THE U.S. ENVIRONMENTAL PROTECTION AGENCY,  
30% OF THE ENERGY USED IN COMMERCIAL BUILDINGS IS WASTED!

### **UTILITY BILL AUDITS**

Am I being charged accurately?

### **MARKET INTELLIGENCE**

When is the best time to purchase?

### **CUSTOM POWER PROCUREMENT**

What is the best rate structure for my facility?

### **POWER QUALITY ENHANCEMENTS**

Is my facility running efficiently?

Electricity is, by far, one of the largest over-head utility expenses in any businesses today. Energy usage can account for over 50% of the total utility expenditures in a facility. It is extremely important to take steps to minimize these costs.

Filter My Power provides an array of services focused on your energy needs, such as:

- Auditing your utility bills for mistakes
- Procuring a custom fit energy plan for your facility, or;
- Protecting and cleaning your electrical system for a problem free, efficient running electrical environment

**All these solutions are sure to Save You “Watts” of Money!™**

## UTILITY BILL AUDITS

Today's electric bill is littered with various energy charges and fees. Deciphering this information is near impossible, especially for a large energy user with multiple services. Filter My Power's utility bill audit can assist in the recovery of unnecessary fees, taxes, tariffs and keep the utility company accountable for any over-charges on current and future contracts. Our auditors can go back up to 4 years to recover any infractions and have this overpayment refunded back to you, *free of charge!*

A review of all applicable taxes, fees and surcharges on your electricity bills.

An analysis of supply costs in deregulated markets to ensure present pricing structures are in line with market trends.

Provide analysis to determine the cause of your facility's high energy bills or billing errors.

FMP's professional auditors will be able to discover what's costing your business more than it should. Building owners need to know whether the cause is inefficient equipment and systems or billing errors. With over 25+ years' experience, our experts will give your business the attention it needs.

**We ensure your business is being charged accurately!**

## CUSTOMIZED POWER PROCUREMENT SERVICES

Another resource provided to FMP customers is the ability to procure your power contracts. Not only do we consider price per Kwh, but we also look at all factors which contribute to your electricity price. If electricity prices increase, so will your utility bills.

Your rate structure is influenced by various key factors:

- Peak Demand
- Power Factor
- Seasonal – Weather Conditions
- Time of Day Usage
- Load Factor
- Transmission, Distribution & Nodal Charges
- Power Plant Fuel Costs & Expenses
- Meter Fees
- Renewable Energy options
- Minimum Usage Levels

With FMP, you will have access to a vast array of reputable energy suppliers, who competitively bid on the chance to provide your energy. When suppliers know they are competing, you will benefit from competitive pricing and terms. Our reverse auction portal will allow for Real-time alerts and transparent competition as suppliers bid for your business. This is a fully automated process creating an efficient transaction with digital signature processing. FMP will also assist in all aspects such as enrollment, auction set-up, transaction details, and account management.

**FMP ensures you are getting the absolute best rate structure for your facility!**

## MARKET INTELLIGENCE

Empower your energy purchase with Market Timing

Our intelligent feature helps answer the age-old question,

**“Is Now a Good Time to Buy?”**

As a consumer, we would all love to be able to purchase in the energy market just before it goes up, as well as to get out of the contract right when the markets go below the purchase price. But can you really beat the market and predict the best times to purchase?

To help you make the ideal choice at the ideal time, we offer Market Timing. It's a sophisticated alert system built to be your expert market analyst that is constantly working to help you determine the most optimal time to purchase energy.

Created by a robust group of brilliant minds, this powerful feature is available to all our customers. Our system uses a Gradient Boosted Trees Model that currently has a 90% accuracy and is constantly improving.

### How Does It Work?

Our Market Timing algorithm continually scans the energy market, considering current daily energy rates from all supplier partners. The system compares these rates with over 10 years of historic data to see trends and uses an intelligent forecast model to determine the best day to start or renew an energy contract.

**FMP will make certain you are purchasing your energy at the most optimal time based on highly accurate market timing conditions!**

*Saving You "Watts" of Money!*

## POWER QUALITY TESTING & ENHANCEMENT SERVICES

Clean power is a necessity for businesses to operate most efficiently. "Dirty" Power problems can affect your electrical equipment's performance, causing overheating of AC motors, transformers and power cables and can also be the cause of premature failure of sensitive electronics. The lack of efficiency in your system can cause increased operational costs, unexpected downtime, and safety risks for employees.

FMP's staff of professionals can help identify power problems with the use of high-end testing equipment, design a solution and implement the necessary equipment to provide ultra-clean power to your facility. These solutions have been proven to enhance the performance of all your electrical equipment and bring electricity and maintenance costs down.

**INCREASED OPERATIONAL EFFICIENCY  
+  
HIGH PERFORMING EQUIPMENT = LOWER ELECTRICITY COSTS &  
LOWER MAINTENANCE COSTS**
