# ROES Server Controller Keyboard Setup

1. Connect the USB cable between a USB port on your PC and the controller box. Windows should automatically detect the device and install it. This device will work in parallel with your main keyboard.

2. Before moving forward be sure the controller works correctly. Open a text editor on your PC and test the wheels by pressing Enter, Next and Previous buttons to see if the controller generates keyboard characters.

3. Open ROES Server, right click on an order and press color correct now to activate the color correction module.

4. Press the setting button on the bottom right of screen.

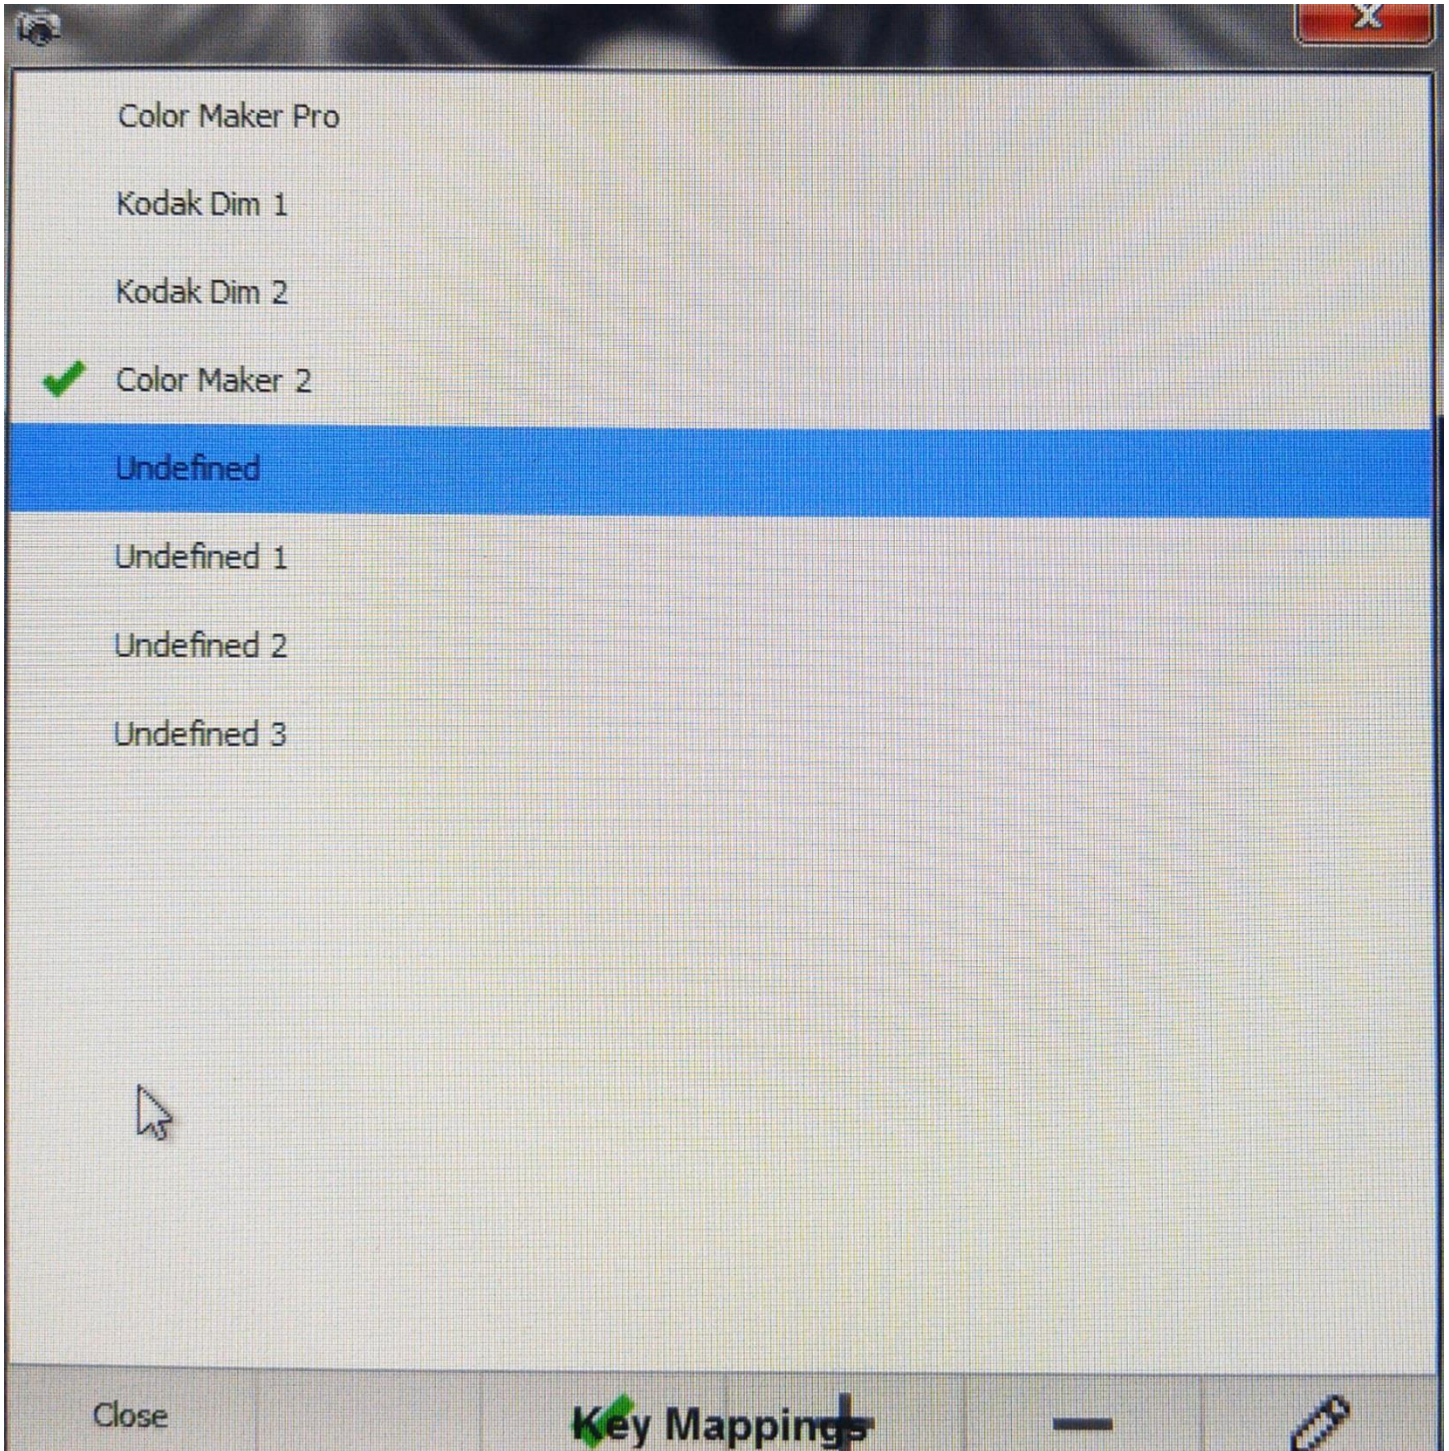

5. Press set key mappings.

6. Press Key Mappings + button to add an "Undefined" controller

Key Mappings   —

7. Select the "Undefined" and press edit key 🖉

Color Maker Pro

Kodak Dim 1

Kodak Dim 2

✔ Color Maker 2

Undefined

Undefined 1

Undefined 2

Undefined 3

Close   **Key Mappings**   —   🖉

8. Assign a name for the controller and the following keyboard characters shortcuts:

Name:	Color Maker 2				

| Decrement			Increment		
b	Brightness	a		Next	x
f	Red	e		Previous	y
i	Green	j		Mode	u
n	Blue	m			
k	Hue	l			
h	Saturation	g			
d	Contrast	c			
p	Gamma	o			

Mode switches to: Color Maker 2

Save   **Edit Key Mapping**

9. Press save and close all windows.

10. Click again on setup button ⚙▾ and select set color response.

Color Correction Color Response

Set the response value for the color controls. The step value is essentially a multiplier value that is applied to the count for color control.|

Step

Brightness: 2.0

Red: 2.0

Green: 2.0

Blue: 2.0

Hue: 2.0

Saturation: 2.0

Contrast: 2.0

Gamma: 2.0

Cancel   OK

11. Set all the response values to 2.0 and press OK. Device is now ready for use.
Press Mode button once to toggle between Mode 1 and 2. Button light is OFF for Mode 1 and ON for Mode 2
