GroundMaster CITY MASTER ULTRA Ground Line Noise Neutraliser

Ground is a half of the signal that your HiFi is attempting to reproduce. The part that the “hot” side needs to refer to, to be accurate. The most expensive cartridges, DACs, pre amps, amplifiers and speakers will not deliver a faithful performance if the ground is moving, shaking and wobbling with the noise that is always present on every ground line.

CITY MASTER ULTRA takes the acclaimed technologies incorporated into the GroundMaster CITY, refining and significantly increasing the efficacy to provide the highest levels of ground line noise reduction achievable when it is impossible to install a supplementary ground rod.

Supplied with the necessary specialised cables to connect to a wall socket and to a Puritan power conditioner or other power distribution device or to a Puritan RouteMaster.
