**PSM156-NFR** Super High Definition Power Conditioner Incorporating Furutech GTX NCF Rhodium Sockets

The Puritan PSM156 is renowned worldwide for significantly lifting the performance of HiFi and Audio Visual systems.

To take this performance upgrade provided by the PSM156 to a yet higher level for users of the USA Nema plug and socket system, we have preserved all aspects that made the PSM156 so respected and fitted it with the best USA Nema connector technology that we know; the Furutech GTX series.

Overleaf are some details of what makes these connectors special in particular the form and materials of the contacts and the fact that the blade contacts are encircled by a stainless spring steel clip to increase contact pressure and to ensure that this increased pressure is always maintained irrespective of the number of times a plug may be inserted and withdrawn.

All contacts are Rhodium plated a material that is extremely hard and durable. The supplied Ultimate lead also has Furutech Rhodium connectors. For the best results the wall socket should be replaced with a Furutech GTX-S NCR (R) socket wall plate and cover, both to maintain contact integrity throughout and to ensure that no galvanically dissimilar metals are in the chain.
