

We are driven to significantly improve how interventional procedures are performed today, to increase the accessibility of such procedures while dramatically improving clinical outcomes.

We intend to accomplish this in two phases: first, by bringing to market our digital navigation platform that radically improves outcomes for complex interventional procedures. Second, the encodings of our platform allows us to capture – digitally – all facets of each patient and procedure to enable AI-driven predictive analytics and best-of-breed practices.

FronD is located in Fremont, CA, USA.
