Global discussions on deinstitutionalisation have intensified in recent years. In response, FICE International has developed a statement as a guiding resource for professionals, policymakers, caregivers, children and young people, and the wider public. Its purpose is to support collective efforts toward the development of quality, appropriate, and child-centred alternative care. NACCW has been following discussions on deinstitutionalisation, now gaining attention in South Africa. While it may benefit some children, careful consideration is essential. Ongoing social and economic challenges mean many vulnerable children in South Africa will still require a continuum of quality alternative care options including residential care. Join us to engage on this important topic.

NACCW webinars promotes excellence in CYC practice!

Every month prominent guests from across the globe will present on various aspects of our practice - as refreshers for veterans and established workers, and inspiration for learners and students.
