

AZ-CVR Constant Volume Regulators

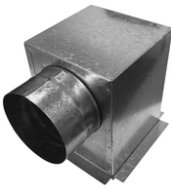

Constant Volume Regulators (CVRs) are devices used in HVAC systems to maintain a consistent airflow rate, regardless of pressure variations. They work by automatically adjusting the airflow to a predetermined volume, ensuring efficient and balanced ventilation.

Functionality: CVRs limit airflow into or out of a room, preventing over-conditioning and ensuring uniform air distribution. **Applications:** They are commonly used in high-rise buildings to counter the thermal stack effect and ensure proper air intake and exhaust across multiple floors. **Benefits:** CVRs enhance energy efficiency, improve air balancing, and maintain consistent indoor air quality.
