

AZ-CMD5B5

DUCT CARBON MONOXIDE DETECTOR

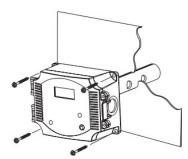

DESCRIPTION

The AZ-CMD5B5 series carbon monoxide detector uses an electrochemical sensor to monitor the carbon monoxide level and outputs a field-selectable 4-20 mA or voltage signal. The voltage signal may also be set to 0-5 or 0-10 Vdc. The sensing range and output may be scaled to either 100, 150, 300, 400 or 500 ppm via the on-board menu. A front panel LCD is standard to ensure easy setup and operation. Other standard features include a back light for the LCD, a front panel test switch, status indication and an alarm buzzer. The test function may also be controlled remotely with a digital input signal. The on-board menu allows for local configuration of all device parameters. Optional features include one or two alarm relays and/or RS-485 network communications configured for either ModBus or BACnet[®] protocol.

TYPICAL INSTALLATION

For complete installation and wiring details, please refer to the product installation instructions.

The AZ-CMD Duct is installed through the side of the duct, and fastened securely to the duct through the mounting holes provided.
