SOFTENING & PREVENTION OF FINE LINES & WRINKLES AND ADVANCED TREATMENTS

With expression and as we age, we form fine lines and wrinkles on our face. These fine lines, wrinkles and folds are caused by many factors including gender, genetics, skin type, sun exposure, lifestyle, smoking, excess alcohol, poor diet, the environment, pollution, free radicals, poor skin care, the ageing process and so on.

One of the ways we can reduce these from appearing, or soften them if they have already formed, is by blocking the muscle movement temporarily with an injectable prescription only medication, Botulinum Toxin A.

A full medical consultation and assessment is required prior to any treatment to ensure medical, physical and psychological suitability with a clinical indication or need to treat.

This treatment is not suitable for all and there are many other ways and treatments available to address these concerns of fine lines and wrinkles. For example, medical grade skin care, skin treatments, skin boosters and soft tissue fillers. Sometimes a combination of treatments is recommended also. There is also the option to have no treatment at all and continue with a good quality skin care regime and SPF 50+ protection daily. We discuss options in depth at your Consultation.

Botulinum Toxin A can also be prescribed to temporarily treat other cosmetic concerns such as the advanced treatments overleaf.
