Touch Therapy Treatments

pHformula TOUCH THERAPY treatments are non-invasive, **holistic facial treatments** that focus on specific pressure points on the face, which stimulate the body's own healing process.

These treatments have been specifically designed to work in synergy with the resurfacing treatments, targeting **ageing, hyperpigmentation, acne, rosacea** and **sensitive skin**. Combining our skin resurfacing solutions with the touch therapy techniques further enhancing the “inside out approach”

This unique treatment combination aims to improve **health and wellbeing** with the unique benefit is that it can aid a more radiant youthful complexion as well as leaving the skin to appear tighter, smoother and plumper over a series of treatments.

Touch Therapy Treatments can also be combined to compliment your **Skin Resurfacing Treatment**.

A Skin Consultation is required prior to all treatments.
