

Chemical Peels

Chemical Peel Treatment

Face & Neck Chemical Peel 30 minutes £65

During this treatment a chemical peel solution is applied to the skin surface to chemically loosen dead and damaged skin cells causing exfoliation and encouraging regeneration and rejuvenation of new skin cells.

Chemical peels range in depth from very superficial to deep, although several light depth peels can often achieve similar results to deeper peels with less risk and shorter recovery time.

As with all treatments repeated treatments may produce improved and longer lasting results.
This will be discussed during your Consultation and Treatment Appointments.
