## Patient Tip of the Month

Since the innovation of

prosthetic liners, the sensitive skin of your residual limb is not likely to come in contact with your prosthetic socket. But, it is still crucial to clean your socket at least once a week. First, wash your prosthetic socket with water and pH neutral soap and then leave it out to dry. Then, disinfect the socket with an alcohol spray.

## Introducing our Patient Care Coordinators and the amazing job they do!

Patient Care Coordinators meet with each patient and their families to educate and answer questions about Stability Prosthetics. We walk them through the entire process from start to delivery of their new technology. We get to know them and find out what their goals are, what their environment is like, and how we as a team are going to be there every step of the way to help them meet their goals. We offer the best patient experience, not only for the patient, but for the referral source as well. We take the burden off the healthcare staff by handling all paperwork and communicating with them every step of the process. And after delivery, we follow back up with our referral sources to show them progress made by our patients.
