Through the "see, treat and follow up approach".

KEY DEPARTMENTS OF OPERATION.

1. Blood donations and mobilization for cancer patients.

Page | 2

2. Cancer awareness, screening, vaccination, and treatment.

3. Cancer survivorship, orphans and vulnerable children. [Ostomy bags, catheters, urine bags, blood bags and supporting the education for the survivors children].

4. Provision of FREE chemotherapeutic drugs, diagnostic/imaging tests and accommodation/transport to desperate, financially incapable patients through our TRUST FUND Kitty.

5. Training of Clinical Colposcopists in all Counties and Regions of Kenya.  
CLINICAL COLPOSCOPY TRAINING INSTITUTE.

PATIENTS ON CHEMOTHERAPY, RADIOTHERAPY AND SURGERY NEEDS  
 BLOOD.LETS SUPPORT BLOOD DONATION EVENTS.

Cervical health and cancer screening are a key component to reproductive health .It’s difficult to leave the parts behind. This therefore requires an orchestrated workmanship to face the field cases. In our project we conduct these screenings in the following headings.

- **Cervical and breast Cancer awareness.**
- **Cervical Cancer and HPV caused cancer screening and treatment.**
- **HPV screening and Clinical Colposcopy.**
- **STI Screening and treatment.**
- **Family planning.**
- **Breast cancer screening.**
- **Colorectal Cancer Screening.**
- **Oral Health awareness and Cancer screening.**
- **Fistula programme and the blood donation drives.**
- **Survivorship, orphans and vulnerable children. [OVC]**

---

### STRATEGIC PLAN:

- **Better Outcomes for the patients.**

Advancing access to multi cancer early detection [MCED] tests that can identify the presence of more than one cancer at a time before signs or symptoms appear.

- **Better Outcomes for people who are medically underserved.**

Extending screening resources beyond health care centres and meeting people in the places they live work and play.

- **Better outcomes for all.**

Offering a new, interactive tool that delivers a personalized screening plan anyone can take with them to their health care provider's office.

---

### MISSION:

Help in total eradication of HPV related cancers by conducting free cervical cancer awareness, HPV vaccination to both boys and girls, early screening, early diagnosis and treatment. This is targeted to all the women of reproductive age from rural to urban centres irrespective of their economic status.

---

### VISION:

**A world where cervical cancer is eliminated as a public health problem.**

Our vision is to see every boy and girl from **9** years of age gets the **FREE HPV** Vaccination as recommended by the WHO Standards as well as every woman gets early and routine cervical cancer screening and or early treatment as per the protocol laid down. This will give rise to zero cervical cancer deaths. More so, we envision to partner with the like-minded individuals, corporate and the Government in achieving **90% - 70% - 90%** score in cervical cancer eradication through vaccination, Screening and treatment respectively. In broader perspective, we envision to cover all aspects of family planning and reproductive health and other screening procedures incorporated in our system.

---

### GOAL:

To make Kenya a free cervical cancer Country eradicating pain and financial burden associated with cancer care. This in turn supports the society in all aspects through meaningful utilization of indigenously available resources making a healthy and in turn a wealthy nation.

Beyond zero,deaths coverage with a **30%** reduction in mortality from cervical cancer.

## NATURE OF ACTIVITIES:

Door-to-door, house-to-house, cancer awareness in every ward, Sub-County and County to County levels. This involves liaison with the local community health volunteers.

Community mobile screening mass camps.

Schools HPV awareness Campaigns.

Training of health care workers on the conduct of cervical screening and clinical colposcopy.

## OBJECTIVES:

- To conduct FREE cervical and breast cancer screening and blood donation drives.
- To reduce to zero or near zero, deaths caused by HPV related cancers, through appropriate vaccination, early screening and early treatment of cervical dysplasia.
- To create a FREE cervical cancer, STI screening/HPV vaccination center in every County of Kenya.
- To adopt the technique and protocols of “**See, treat and follow up approach**”, through adaptive **SMART CARD TECHNOLOGY™** and scientific clinical colposcopy.
- To ensure more Clinicians and nurses are trained on the aspect of correct cervical screening and diagnosis/treatment through good principles and practice of clinical colposcopy.
- Not only screening but to facilitate and increase the donations of much needed cervical screening devices to the **Point of Care [POC]** Level 4 and Level 5 hospitals in every county of Kenya.
- To provide state of the art cryotherapy based treatment kits and self-sampling kits to increase the uptake of cervical cancer screening and diagnosis in rural regions of Kenya.
- To be the most well-coordinated research and data center for the NCI-and other health research and training institutions.
- To be the leader in cancer screening, research and training in clinical colposcopy.

## AREAS OF WORK:

- Cervical, CRC, Breast, prostate cancer awareness campaigns/FP.
- Cervical Cancer/STI screening –“see, treat & follow up” approach
- HPV screening using self-testing devices.
- Treatment of early dysplastic lesions, CIN-[Cervical intra epithelial neoplasia] CIN1, CIN2, CIN3 through, cryotherapy and thermal ablation and LEEP procedures.
- HPV/STI screening using self-testing devices.
- Training of health workers in advancing knowledge in cervical screening/Colposcopy, diagnosis and treatment procedures.
- Outreach community rural programs, blood donation camps.

### MODEL OPERANDI.

#### ARGUMENT ALGORITHM 1:

Involves screening of the cervical cases. This is through “see, treat and follow up approach”.

#### Components include;

##### In house Screening,

- **VIA** [Visual inspection with acetic acid].
- **VILI** [Visual Inspection with Lugol’s iodine].
- **Clinical Colposcopy.**
- **Pap Test.**
- **NAT**

##### Out house screening,

- **HPV Self-Test kits.**

#### ARGUMENT ALGORITHM 2.

Contains components and tools of diagnosis

#### Components include;

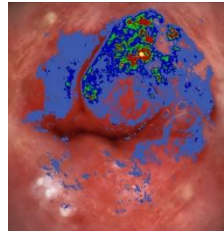

- **Colposcopy Devices with green light component**
- **Full diameter Speculum.**
- **Cone Biopsy/Punch devices.**
- **Thermocycler.**

The purpose of this argument is to classify the type of the cervical lesions involved. It’s the definitive form of the cervical cancer diagnosis.

Classification is basically routed from **VIA/VILI** and or Colposcopy Findings and the swede scoring system. Other observations may be obtained from self-test HPV kits analysis and the pap tests. Types of the lesions for treatment at the POC [Point Of Care] based on Colposcopic findings.

**Carcinoma intra epithelial neoplasia [CIN]**

- CIN 1.
- CIN 2.
- CIN 3.

**ARGUMENT ALGORITHM 3.**

This comprises of the treatment algorithms such as:

- Cryotherapy
- Thermal ablation.
- Microwave Ablation.
- LEEP.
- Brachytherapy.

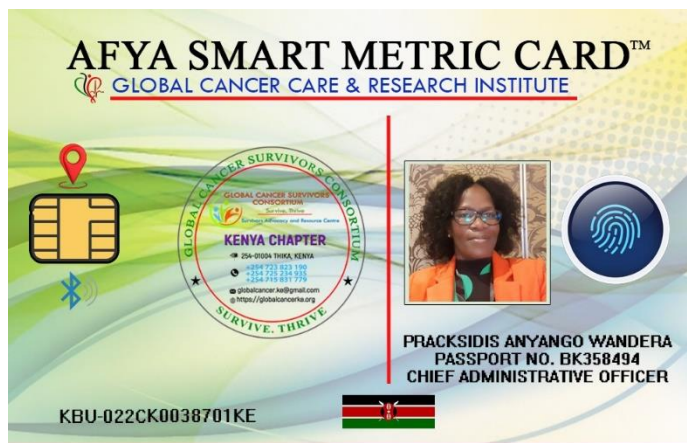

Referral for Other Oncol-surgical or chemo-radio interventions guided by the patient navigators.

**ARGUMENT ALGORITHM 4.**

**Follow up.**

Here the use of the tracking devices for any patient found to have CIN 1, CIN 2 and CIN 3. In our model, we use a **SMART CARD TECHNOLOGY** called **AFYA SMARTMETRIC CARD™** to store patient data under a secured fingerprint mode. The information about the patient is in form of the bio data, cervical images via colposcopy examination. This is then sent for a copy to our secure remote server. Every visitation for review, a patient is needed to produce this card and access is only through fingerprint reader and identification. The clinician then can compare the images for the first day of examination, second revisits and any consecutive visits of treatment and progress evaluated. This is a good prognostic and qualitative measure of the process of cervical treatment using any of the **Argument 3** above.

TREATMENT MODALITIES: CRYOTHERAPY, THERMAL ABLATION AND LEEP.

	<b>HPV VACCINATION.</b>		<b>SCREENING/TREATMENT - TARGET GROUP.</b>							

DATA COURTESY FROM CENSUS 2019 .KDS.

There is a massive need to introduce more screening, treatment and vaccination centres in every County of Kenya. We believe in the dual mode of vaccination –both boys and girls. The concept is *“One County, one screening vaccination and treatment centre”, for the see treat and follow up approach.*

We are also appealing to any National or International corporates, individuals to **ADOPT A COUNTY INITIATIVE** and sponsor One County for FREE cervical cancer awareness, screening, vaccination and treatment.

**MODUS OPERANDI.**

- Every region is run by the Regional Coordinator.
- Provision of Colposcopes and equipping of the designed facilities.
- **Training of 2 health care workers** in every screening centre.
- Establishment of a **blood donation** unit in these Model screening centres.
- Training, empowering and incorporating Community Health promoters in awareness and community mobilization.
- Identifying & empowering cancer Survivors needs including supporting their children in paying for their education, nutrition & oncology clinic visitation

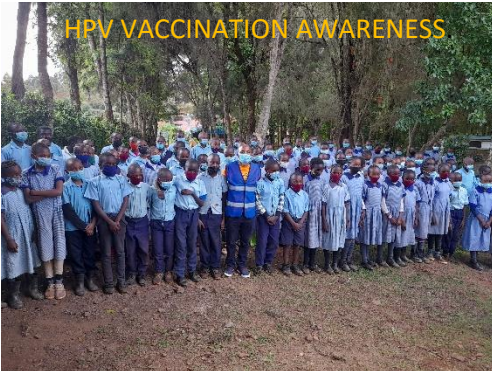

## ACHIEVEMENTS.

- Successfully launched FREE CRC screening, cervical cancer screening, vaccination and treatment centres as points of care through “see, treat and follow up approach” in 7 Counties successfully.
- Able to secure donation of essential cervical cancer screening devices through partnership with other International NGOs.
- We have made to train some good number of Clinicians on aspects of cervical screening, treatment [Cryotherapy] and clinical colposcopy.

## OUR IMPACT/STATISTICS:

- 7 Counties established screening missions & 25 awareness projects.
- 1,278,218 breast and cervical cancer screenings in 6 counties.
- 1,756 prostate Cancer screening in 6 Counties.
- **345 CRC screenings done, 76 CRC cases caught up and referred for early treatment & successful.**
- **9 cases of oral cancers identified and fully assisted.**
- 12 Cases of unrepaired & poorly repaired perineal tears identified & assisted.
- 130 patients tested/screened for hepatitis B.
- **613 cases of CIN2 and CIN3 successfully treated with cryotherapy**
- 108 cases of CIN 3 > 75% successfully done LEEP.
- 74 survivors of early detection and early treatment through referral via our patient navigators.
- Treated 10,000 infections cases presented during mass screening.
- Assisted 464 women with contraceptive options during our screening camps and over 2000 pints of blood donated during the events.
- Over 50,000 breast self-examinations, cervical, and prostate cancer **guides done** with cancer information materials distributed.
- Reached over 5 million audiences needing cervical, breast and prostate cancer screening through our social media platforms, brochures, Facebook.
- **Trained 17 clinicians comprehensively on the aspect of Clinical colposcopy and cervical pathology.**

**IMPACT GALLERY.**

**TAKING CARE OF SURVIVORSHIP PROGRAM WITH ORPHANS AND VULNERABLE CHILDREN [OVC] THROUGH THE TRUST FUND.**

|SCREENING|TREATMENT|VACCINATION|TRAINING|RESEARCH|EDUCATION|TECHNOLOGY|

Through the "see, treat and follow up approach".

**CHALLENGES:**

- Massive deficiency of funding to cover up the 8 regions direly in need of our services total of 47 Counties.
- Chargeable high cost of shipping of donated medical devices from abroad and delayed clearance of these devices from the port of entry and thus attracting more charges.
- Lack of co-ordination from the local government in allocation of facilities that can be used as screening centres
- Untrained, in competent or poorly trained screening/colposcopy team delaying establishment of colposcopy services in already set free screening centres. This calls for more funding to provide this much needed training in health care workers.
- Lack of good models of quality specified disposable vaginal speculums /proctoscopes available in the country. There is a high influx of low quality, dangerous, **Non-FDA/CE marked** speculums that does not work with our standard. Our colposcopy screening requires a wide Multi petalled” speculum with self-lighting torch.
