

Project Services

The IT-RS Project Consulting team delivers infrastructure solutions that are innovative and transformational, to enable your business to respond to this ever-changing digital world.

IT-RS has a pool of over 400 qualified architects, technical consultants, database consultants, engineers and project managers who have experience covering all areas of infrastructure integration.

Customers' needs scale with the number of users - our current clients vary in size, from 50 to 2,000 and our services range from strategic road maps to end-to-end delivery of specific solutions.

We organize our staff in virtual teams that focus our training, knowledge-sharing and expertise to offer our customers the best possible solution in the ever-changing world of IT.

As a result of our size and large customer base we have extensive hands-on experience working with many infrastructures and technology platforms. This allows us to assign to our customers skilled personnel who can "hit the ground running" - delivering expertise to your organization that is skilled, qualified and has considerable prior experience.

Because we have engineers trained in all key technologies, our architects understand which technologies are best suited to specific environments and can design the best solution accordingly.

IT-RS Project Services team deliver the following benefits:

- Large number of qualified personnel with certifications in the key technologies
- Experienced in a range of complex projects
- Well-established relationships with the main technology vendors
- Delivering outcomes and business benefits to our customers, on time and to budget
- Enterprise infrastructure consulting and deployment
