

Is your AV up to scratch?

Take a moment to look at your audio visual systems and follow the checklist below.

■ Does your AV look tidy?

- Loose hanging cables can easily be kicked or pulled accidentally, causing a system outage.
- Unlevel TVs can be a sign of damaged brackets or walls
- Your colleagues and clients base their image of you on how you treat your office, bar, hotel or school.

■ Is anything damaged?

- Damaged or worn screens can damage users eyes, and damaged touchscreens make using equipment a chore, not a joy
- Hissing or buzzing speakers can be an annoyance and damage ears
- Broken connection plates or cables are easy to sort but put a stop to any productivity

■ Is the system easy to use?

- Remote workers coming in to use your system may not be familiar with how it works. A simple to use system boosts productivity
- Video conferencing is a normal part of running a business. Users need to be able to interact with it quickly before a client meeting
- Can you remotely manage your work spaces?

■ Are you happy with your AV?

- Do you need mobile systems from time to time?
- Does it annoy you or slow you down to use your system?
- Do you know exactly how to use it?
- Do you have exactly what you need or are you left wanting more?

Can't answer yes to all the questions? Give us a call on 01296 593818 or email us at info@mpav.co.uk to see how we can help support you.
