1. Sign up for Coinbase account or a similar crypto currency exchange.

2. Buy Solana (SOL). Solana is a crypto currency and platform for creating tokens/coins, NFT's, and buying/selling of crypto.

3. Sign up for a Solana based wallet. For example, Phantom Wallet is available on ios or as a Chrome extension but not through Android phones. This wallet is easy to use and is free. This will be where you can store Solana and Sixy. Follow closely to directions and save all passwords. This will help to ensure your wallet is secure and you can access it again at any time.

4. Transfer your Solana to your Phantom wallet by copying and pasting the address available at the top of the Phantom wallet app into your Solana wallet on Coinbase or other exchange. Your Solana wallet can be found by choosing the asset Solana and clicking on the send/receive button. Click send and the Solana will be transferred within seconds to your Phantom wallet from Coinbase.

5. Go to raydium.io and launch the Raydium app by signing into the network.

6. On the Raydium page there is a tab for connecting/linking a wallet to Raydium. If you chose to use the Phantom wallet, the select Phantom from the list, enter password, and the wallet will then be able to be used on Raydium.

7. When your Phantom wallet is linked on Raydium, you will be able to use your Solana to swap for USDC coin under the SWAP section on Raydium. Then use your USDC to swap for Sixy coin.

8. It is important to keep around $5-$10 of Solana available in your Phantom wallet to pay for transactions. The transaction or "gas" fees are often a very small amount but necessary to complete transactions.

9. Sixy coins will swapped/exchanged on Raydium and the actual tokens will be stored in the Phantom wallet.

10. To check the current price of Sixy, create a swap ticket that shows you swapping/exchanging 1 Sixy coin to USDC.
