

What is Mold?

Molds are fungi that can be found both indoors and outdoors. No one knows how many species of fungi exist but estimates range from tens of thousands to perhaps three hundred thousand or more. Mold grows faster on substrates between 5 and 50 degrees Fahrenheit and aerosolizes in warm, damp and humid conditions. Mold spores can survive over time and under harsh conditions affecting the indoor air we breathe.

PROTECT THOSE YOU CARE FOR

Make an appointment and get the best response, and the best service, in Northeast Ohio

Indoor contaminants from water damage can cause attacks in people with asthma who are allergic to mold. Mold exposure can irritate the nose, throat, and lungs of both mold-allergic and non-allergic people.

Don't trust the health of your family, employees, or clients to just anyone. We offer personalized and professional services, and we're locally owned and operated in Berea, Ohio.
