

What do we charge you?

There is **NO CHARGE** for our **Visit, Inspection and Consulting**. If needed, lab samples are delivered **NEXT DAY!** We can deal with property owners delicately. We have 10 years of experience with owners and builders in this area.

Property Assessment

SafeHouse will deliver a Confidential Assessment to determine quickly if the discoloration is non-biological and the construction process can continue safely OR out of an Abundance of Caution, remove it immediately.

As your Environmental Consultant, SafeHouse will prevent additional or wide-spread contamination, reduce your risk from exposure, provide the utmost confidentiality, and promote your environmental responsibility.

If Contamination Exists

SafeHouse will discuss options to clean it up quickly, isolate the area so you can continue work safely, and prevent additional or cross-contamination to other unaffected areas.

M Assessment**

Common Questions We'll Answer for You about Water Damage or Mold

Is this discoloration or odor biological?

What is the source of this contamination?

If we have it tested, are we required to disclose the results?

If we keep working, will we contaminate or cross-contaminate other unaffected areas at our customer's home or building?

Should we remove it ourselves or call a professional and why?

How quickly can SafeHouse clean it up?

Should we be wearing masks?

Can SafeHouse isolate/contain or remove the source so it WILL NOT GROW BACK?

SafeHouse will answer ALL these questions quickly and confidentially, so you can continue working safely without risk from exposure or cross-contaminating other unaffected areas.

www.asksafehouse.com

- Technology, experience, credentials and the appropriate insurance to protect your company.
- A 4-hour emergency response for your project managers and field supervisors.
- The newest technology available for on-the-spot assessment and diagnosis to determine if contamination exists.
- The appropriate field equipment, HEPA air filtration, and quick barriers to isolate or contain areas expected to have biological growth.
- Infrared, borescope, protimeter and other technologies to identify moisture and points of moisture intrusion where growth is suspected or has potential to grow.
- 24-hour turn around for lab sample analysis. Identify air or surface contamination levels or genus.
- Accredited third party documentation and E-verification.
- We can deal with your customer, if necessary, SafeHouse has worked with builders and their customers for years.
- A fully-trained and licensed mold remediation workforce to handle large or small remediation projects quickly and professionally without delay.

What we do:

- 1 Isolate area, install air filtration and engineering control so you can finish the project safely, without cross-contamination to other unaffected areas.
- 2 SafeHouse will determine this discoloration is NOT biological so you can keep working.
- 3 The creation of a safe, non-toxic, step-by-step treatment plan SafeHouse can implement quickly, in order to get you back to work.

Preferred Contractor Program

We'll determine the cause, remove the problem, protect your employees and give you and your customer peace of mind.
