Innovative Cloud Solutions

In a digital world, there is an incredible and ever-increasing demand for scalable, economical network structures. A private cloud enables rapid deployment, universal on-demand access, rapid failover and recovery, significantly increased security, and complete control of the economics. Private clouds deliver a dedicated network infrastructure, layered with your specific software applications, placed in a protective and optimized virtual system running in your environment or ours, and securely accessible from everywhere. Cloud solutions are developed to FedRamp compliance.

Complete IT Infrastructure assessments provide insight into your inventory of assets, applications, and configurations. IT Assessment and Vendor Assessments from Innovative help your organization plan for your desired infrastructure state and align IT investments with business strategic goals. Innovative Solutions is ready to show you how leverage private cloud for cost savings.
