

Arctic Turning Bed

Top 10 Features & Benefits

1. **Cost-Effective & Trusted:** Recognised for innovative design and featured on BBC DIY SOS, offering reliability and proven performance.
2. **Automatic Night Repositioning:** The bed gently repositions users during the night, ensuring comfort and consistent care without disturbing sleep.
3. **Automatic Turning:** Smoothly rotates users to reduce the need for manual handling, helping caregivers provide safer and easier support.
4. **60-Degree Turn:** Provides a precise 60-degree rotation to reposition users comfortably and safely.
5. **Pressure Care:** Designed to prevent pressure sores and reduce discomfort, promoting healthier skin and better overall well-being.
6. **Reduces Caregiver Effort:** Minimises manual handling, helping caregivers save time and reduce physical strain.
7. **Promotes Independence:** Supports users in maintaining a degree of autonomy while still receiving essential care.
8. **Multi-Positional:** Allows a range of positions to enhance comfort, support, and user preference.
9. **Independent Leg Movement:** Legs can move independently to relieve pressure points and improve circulation, promoting overall health.
10. **Night Care** – Ensures comfort and safe automatic repositioning overnight, allowing both users and caregivers to rest more easily.

Specification

Start Height	16" (41 cm)
Maximum Weight	25 stone (159 kilo), Bariatric 50 stone

Product Overview

The Arctic Turning Profiling Bed from Centrobed is a fully customisable care solution designed for individuals with complex mobility needs. It features an automatic programmable turning system that gently rotates users to reduce pressure, improve circulation, and minimise manual handling.

With full profiling functions, independent leg adjustment, and the ability to sit and turn simultaneously, it delivers precise positioning and enhanced comfort. Compatible with the Centrobed Autobox for hands-free repositioning, it supports pressure ulcer prevention, respiratory health, and caregiver efficiency in both home and clinical environments while promoting safety, dignity, and independence.

Medical Conditions It Can Help With

Duchenne Muscular Dystrophy (DMD) – supports children with progressive muscle weakness.

Cerebral Palsy (CP) – improves posture, reduces muscle stiffness, and aids circulation.

Spinal Cord Injuries – assists with safe repositioning and pressure relief.

Muscular Disorders – helps prevent contractures and maintains joint alignment.

Respiratory Conditions – proper positioning supports breathing and reduces complications.

Pressure Ulcer Risk – automatic turning and pressure relief prevent sores in children with limited mobility.

Limited Mobility / Paralysis – Assists with turning and repositioning safely.

Post-Surgery Recovery – Supports gentle movement and optimal positioning.

Musculoskeletal Disorders – Helps with joint stiffness, arthritis, and back pain.

Neurological Conditions – Supports those with stroke, MS, or Parkinson's.
