Instructions for Updating Existing Backlit Signs

Methods to update existing sign panel graphics

Retainer

Remove screws from retainer permimeter to access graphic panel

Graphic Panel

Sign Cabinet

Retainer

Measure Sign Cabinet to Determine Graphic Panel Size

1. Use a tape measure and find the height and width. Measure from outside of the retainer edge

2. The translucent graphic panel is usually ~1/2" shorter than the retainer (on both height and width)
   to allow the panel to fit within the sign cabinet.
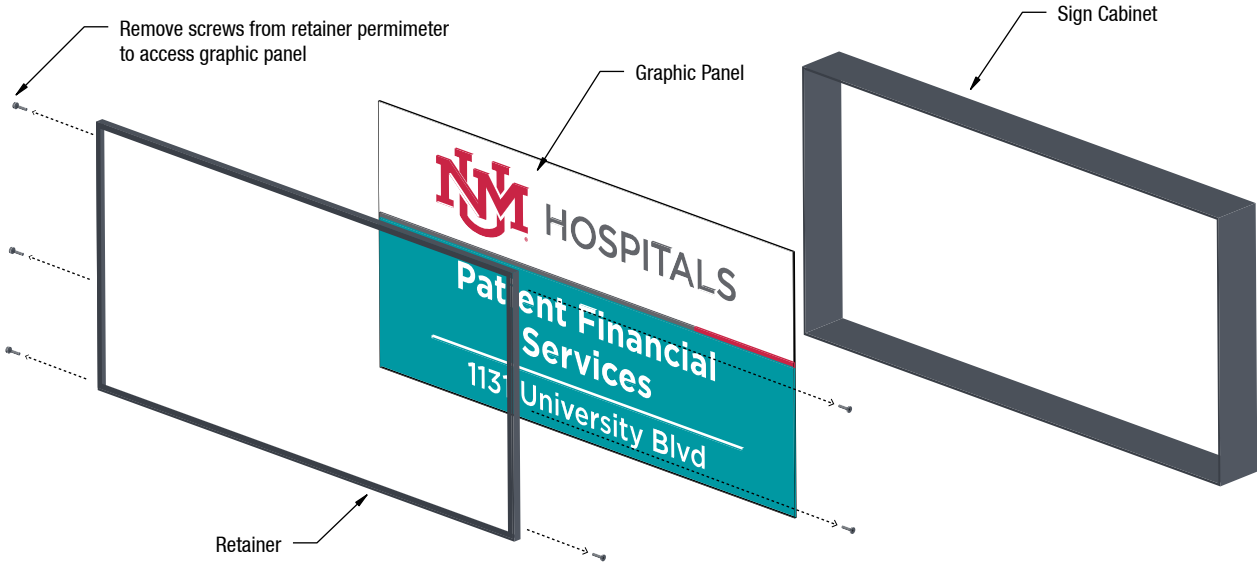

Precision Method to Measure Graphic Panel Size

1. Remove screws from the side of the sign cabinet that fastens the retainer to the sign cabinet

2. Remove the retainer from the sign cabinet

3. Either remove the graphic panel and measure the overall height and width of the graphic panel,
   or measure the graphic panel inside of the sign cabinet, if possible.

4. Compare the size of the graphic panel to the size of the overall retainer to determine tolerances
   of graphic panel compared to over sign size
