

Transitioning from experienced Employee to Entrepreneur: The Realities and Challenges

Work experience doesn't automatically qualify you with the necessary tools to start your own business.

Despite your expertise, customers consider many factors beyond individual skill, such as:

- **Capacity to Handle Issues:** In a new venture, the resources to resolve problems are far less compared to a large, established company.

As a new startup with a small team, the lack of diverse departmental support can be a significant hurdle.

- **Limited Resources:** Operating as a "small ship" means you have fewer hands on deck, as you no longer have the support and information of the other departments in the company. This can quickly lead to being overwhelmed, potentially resulting in taking shortcuts or making mistakes.
