

Application Process

******IF NEW TO JAGUA, TEST A SMALL PIECE OF THE TATTOO ON INNER ARM AND WAIT 24-48 HOURS BEFORE APPLYING FULL TATTOO******

1 Clean and dry the skin completely

2 Remove the transparent film

3 Place tattoo face down on skin. Rub and wet the tattoo back, then hold for 15-30 seconds

4 Gently peel off the paper, with and try not to touch the water for 2 hours

5 4-5 hours after applying

6 24-48 hours after applying (Final Look)

Tips

1. Jagua tattoos can last for 15-20 days.
2. You can apply a layer of vaseline or lip balm on the tattoo to keep it last longer.
3. Avoid rubbing tattoos while bathing, and minimize exposure to sauna, steam room, hot yoga or jacuzzi.

Post-Application Care

Proper aftercare helps the design develop into a rich, long-lasting tattoo.

- **Initial Color:** Immediately after removing the tattoo paper, the tattoo may appear faint or nearly invisible. Do not worry! The stain will darken over the next 24–48 hours, reaching its full intensity.
- **Avoid Water and Friction:** For the first 2 hours, avoid washing the tattooed area, excessive sweating, or friction from clothing. Water and rubbing may interfere with the dye's development.
- **Moisturize Gently:** Apply a gentle, fragrance-free moisturizer to prevent dryness and flaking. Avoid lotions containing exfoliating acids, alcohol, or bleaching agents.
- **Protect from Sun Exposure:** Prolonged sun exposure can cause the tattoo to fade faster. Cover the area or use a gentle sunscreen if needed.

Tips for Longevity

Jagua tattoos typically last 1–2 weeks, depending on skin type, placement, and care. To extend the life of your tattoo:

- **Keep Skin Hydrated:** Well-moisturized skin retains the stain longer.
- **Gentle Cleansing:** Wash the area gently; avoid exfoliating scrubs or loofahs.
- **No Pool or Spa:** Chlorinated or salt water may shorten the duration of your tattoo.
- **Avoid Harsh Chemicals:** Dishwashing soap, bleach, and household cleaners can strip away the dye from your skin.

Safety and Precautions

Though Jagua is considered safe for most people, there are important safety considerations.

- **Allergic Reactions:** Rarely, Jagua may cause redness, swelling, or itching. Discontinue use if irritation occurs and consult a healthcare professional.
- **Not for broken or irritated Skin, or mucus membranes.**
- **Children and Pregnant Individuals:** Consult a doctor before using Jagua on children or during pregnancy.

Frequently Asked Questions

- **How long does the tattoo last?** Typically, 1–2 weeks, depending on skin type and care.
- **Is Jagua the same as henna?** No. Henna stains reddish-brown; Jagua stains blue-black.
- **What areas of skin work best?** Arms, legs, chest, and back are ideal; hands and feet may fade faster due to frequent washing.
- **Can I shower after application?** Wait at least 2- 4 hours after removing tattoo paper before showering.
