

Post-Construction Cleaning

Don't let your budget get out of control by hiring a cleaning company without experience in post-construction cleaning. Construction Cleaning can be a challenge without having the proper knowledge, training & tools to get the job done right, at Awaken to Eco we have that knowledge to keep your project on track.

How to properly perform a post-construction cleaning:

Post-Construction cleaning is done best in 2 cleaning cycles. With the initial cleaning, we clean up the larger items and left over construction materials. Then after all the work has been 100% completed on your home or office, we will perform the detail clean or final clean where we complete the fine cleaning details making home or office ready to be occupied.

Changing Your Furnace Air Filter Reduces the Dust

If you have a larger office building or just making small updates to your home, these steps help to ensure that the dust is kept at a minimum, with replacing your furnace filters just before the detail clean.
