

Our MCS Service Department and its highly trained technicians are equipped with the latest system maintenance technology to test your tooling and perform whatever work your system may require, including:

- Tapping Tool Pressure Testing
- Stopping Tool – Tower / Rod – Pressure Testing
- Gauge Evaluation
- Valve Inspection
- MDS Stopper Testing & Evaluation
- Part Upgrades
- Preventative Maintenance
- Repairs
- And More!

## Keep tapping and stopping with our quality service programs.

For best performance, Kleiss MCS tooling should be inspected, tested, and updated by an authorized service center at least every two years. At Mainline Control Systems (MCS), we can provide you that quality service throughout the lifetime of your Kleiss MCS systems. Our centrally located authorized service center performs the necessary inspections, maintenance, and repairs to help ensure your tapping and stopping equipment is operating properly and safely.

**Contact your local MCS distributor today to learn how our service programs can keep your Kleiss MCS equipment working at its best.**
