

Solar is Changing in California

NEM 3.0 for Homeowners

What is NEM 3.0?

- Net Energy Metering (NEM) is a billing program incentivizing homeowners to **sell solar to the utility for credits**
- After April 14, NEM 3.0 **reduces the credits** homeowners receive from the utilities, **making batteries crucial** to the savings equation
- Under NEM 3.0, **you can still save** by using energy produced during the day and stored in a battery for use at night
- Adding a battery today can **protect against rising utility rates** with the option for **backup against power outages**

Who is impacted?

Homeowners serviced by:

- Pacific Gas & Electric (PG&E)
- Southern California Edison (SCE)
- San Diego Gas & Electric (SDG&E)

Get up to 30% more power and up to 10 days of free power every year with the **SolarEdge Home Battery**
